1 Project Description and Impact Summary

1.1 Introduction

This study analyzes the potential air quality and greenhouse gas (GHG) impacts of the proposed Ventura Ranch Farmworker Housing Complex (herein referred to as "proposed project" or "project") located in unincorporated Ventura County, California. Rincon Consultants, Inc. (Rincon) prepared this study under contract to the County of Ventura for use in support of the environmental documentation being prepared pursuant to the California Environmental Quality Act (CEQA). The purpose of this study is to analyze the project's air quality and GHG impacts related to both temporary construction activity and long-term operation of the project. The conclusions of this study are summarized in Table 1.

Table 1 Summary of Impacts

Impact Statement	Proposed Project's Level of Significance
Air Quality	
Conflict with or obstruct implementation of the applicable air quality plan?	Less than significant impact
Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?	Less than significant impact with mitigation
Expose sensitive receptors to substantial pollutant concentrations?	Less than significant impact with Mitigation
Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	Less than significant impact
Greenhouse Gas Emissions (GHG)	
Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?	Less than significant impact
Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?	Less than significant impact

1.2 Project Background

Project Location

The approximately 83-acre project site is located at 4884 North Ventura Avenue (Assessor's Parcel Numbers [APNs] 063-0-110-065, -035, -090, and -145), east of Ventura Avenue and Floral Drive, in unincorporated Ventura County. The project site is located 3.62 miles north of the City of Ventura and is within the City's sphere of influence. The project site currently contains undeveloped open space, an orchard with associated accessory structures (e.g., barns and storage), and a single-family residence with a covered patio and detached garage. Single-family residential uses and open space are located to the north, with undeveloped open space to the east, single-family and agricultural uses to the south, and Highway 33 to the west, across from which is vacant industrial land. Additionally, the project site surrounds a water storage facility, which is not part of the project site. Figure 1 shows the regional project location, and Figure 2 shows the project vicinity.

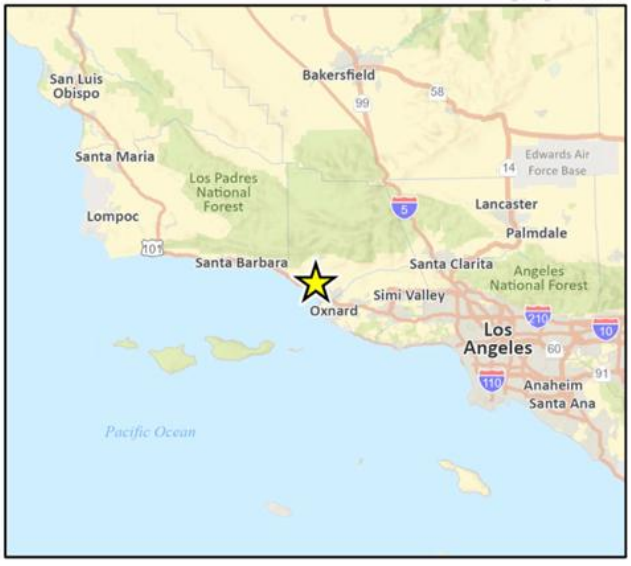

Figure 2 Project Location

Current Land Use Designation and Zoning

According to the Ventura County 2040 General Plan, the project site has a General Plan land use designation of Open Space (OS) and ECU-Agriculture (ECU-A)[1]. The Open Space designation, as defined under Section 65560 of the Government Code, is defined as any parcel or area of land or water which is essentially unimproved and devoted to an open-space use. The ECU-Agricultural designation is defined as irrigated lands which are suitable for the cultivation of crops and the raising of livestock within the boundaries of an Existing Community designated area and encompasses parcels of less than the prescribed minimum lot area.[2]

The project site is zoned with a mix of Open Space (OS-160 ac) and Agricultural Exclusive (AE-40 ac). According to the Non-Coastal Zoning Ordinance (NCZO) Section 8104-1.1, the OS zone permits the following land uses: dwellings (including single-family, two-family, multi-family, and accessory dwelling units), employee housing, farmworker housing complexes, transitional and supportive housing, and care facilities (such as day care centers and intermediate care facilities).[3] In addition, according to the NCZO Section 8104-1.2, the purpose of the AE zone is to preserve and protect commercial agricultural lands as a limited and irreplaceable resource, to preserve and maintain agriculture as a major industry in Ventura County and to protect these areas from the encroachment of nonrelated uses which, by their nature, would have detrimental effects upon the agriculture industry.[4] The existing zoning and General Plan designations for the project site allow for the development of a farmworker housing complex with approval of a Planned Development Permit.

Surrounding Land Uses

Surrounding land uses feature a mix of very low- and low-density residential areas, as well as industrial and commercial land uses. The project site is bordered by residential housing to the north, open space to the east, additional residential housing and a dog kennel to the south, and vacant industrial land to the west.

Project Description

The housing complex would be constructed on three parcels (Parcels 1, 2, and 3) totaling 19.8-acres. The project would set aside the remaining approximately 63-acre parcel (Parcel 4), as a conservation parcel that would be transferred to a Planning Director-approved conservation organization or public agency to remain as open space in perpetuity. The existing farmhouse on the project site would be demolished while the existing orchard would be retained on Parcel 4. The proposed parcels are illustrated in the Tentative Parcel Map shown in **Error! Reference source not found.**.

The project would include construction of 328 residential units within 18 buildings, developed in three phases. Phase 1 would consist of 92 units within five residential buildings on 6.11-acres. Phase 2 would consist of 104 units within six residential buildings on 4.31-acres. Phase 3 would be developed with 132 units within seven buildings on 8.66 acres. Each residential building would consist of a mix of one-

4 ibid

, two-, and three-bedroom units, and would vary between 12 and 24 units. The project phasing plan is depicted in Figure 4.

The development would also involve the construction of one free standing community center, a second community center within one of the residential buildings, two maintenance buildings, and eight trash enclosures. Residential amenities would be comprised of play fields, a teen/adult recreation amenity, playground equipment, a community garden, walking paths, and electric vehicle (EV) charging stations. Acommunity center with an active area is proposed in the northwestern corner of the project site, a playground for children aged five to twelve in the southeastern corner, another playground for children aged two to five in the southeastern corner, and a central green recreation plaza located near the heart of the residential area. Covenants, conditions, and restrictions (CC&Rs) will be established to outline the maintenance and operation obligations for the access easements, community centers, and recreational facilities and mutual rights of access to the amenities between the three residential parcels.

The proposed residential structures would feature a combination of one-, two-, and three-story buildings, with a maximum height of 35 feet. The proposed buildings would be designed in a modern Spanish Colonial style with tile roofing, dark vinyl windows, beige cement plaster, dark brown gutters and downspouts, light brown beams, rafter tails and doors, and decorative tiles. All residential units would be equipped with air filters that meet the minimum efficiency reporting value (MERV) 14 standard.

Regional access to the site is provided by the Ojai Freeway (SR-33). Local site access and internal circulation would be provided by two driveways off Ventura Avenue and private interior streets. A connection to Floral Drive in the northwest corner would be provided for emergency use only, with a locked emergency access gate only available to first responders. The project proposes 30-foot-wide access roads that would extend through the project site before ending at the eastern boundary of the site. The access roads would provide access to all proposed parking spaces and garages and would enable internal circulation of vehicles and bicycles on-site.

The proposed project would feature 565 parking spaces, including 27 ADA spaces and guest parking. Additionally, the project would provide EV charging stations in accordance with CALGreen requirements. Table 2 provides further project details. The Conceptual Site Plan is shown in Figure 5.

Table 2 Project Summary

Project Component	Phase 1	Phase 2	Phase 3
Building Types			
Residential (A)	50,180 sf	50,180 sf	75,270 sf
Residential (B)	34,114 sf	34,114 sf	51,171 sf
Residential (C)	12,758 sf	25,516 sf	N/A
Community Center + Residential (D)	N/A	N/A	17,400 sf
Community Center (E)	4,810 sf	N/A	N/A
Maintenance Building	637 sf	N/A	637 sf
Trash Enclosures	660 sf	440 sf	660 sf
Total Floor Area	**103,159 sf**	**110,250 sf**	**145,138 sf**
Sitewide Open Space, Landscaping, and Parking			
Landscaping			188,957 sf (4.34 acres)
Total Open Space			**248,624 sf (5.71 acres)**
Common			230,758 sf (5.30 acres)

Construction

Project construction would be developed in three phases. Phase 1 construction would occur over approximately 20 months and would involve approximately 14 days of demolition, 90 days of site preparation, 30 days of grading, 14 months of building construction, and 30 days of architectural coating. Excavation and trenching for utilities would involve a maximum depth of up to approximately 10 feet below ground surface. Phase 1 would be operational in 2028.

Phase 2 construction would occur over approximately 20 months and would involve approximately 90 days of site preparation, 30 days of grading, 14 months of building construction, and 30 days of architectural coating. Excavation and trenching for utilities would involve a maximum depth of up to approximately 10 feet below ground surface. Phase 2 would be operational in 2030.

Phase 3 construction would occur over approximately 20 months and would involve approximately 90 days of site preparation, 30 days of grading, 14 months of building construction, and 30 days of architectural coating. Excavation and trenching for utilities would involve a maximum depth of up to approximately 10 feet below ground surface. Phase 3 would be operational in 2032.

A total of 5,700 sf of existing buildings and accessory structures would be demolished and removed from the site. A total of 17,000 cubic yards of soil would be imported during project construction. Exported soil, demolished building materials, and construction waste is anticipated to be taken to Toland Road Landfill located approximately 17.6 miles northeast of the project site.

2 Background

2.1 Environmental Setting

Local Climate and Meteorology

The project site is in the Ventura County portion of the South Central Coast Air Basin (Basin), which is comprised of Ventura County, Santa Barbara County, and San Luis Obispo County. The regional climate in the Basin is characterized by warm summers, mild winters, infrequent seasonal rainfall, and moderate humidity, with the predominate wind patterns following a diurnal land/sea breeze cycle with typical daytime winds from the west. The diurnal land/sea breeze causes air pollutants to be pushed toward the ocean during the early morning by the land breeze and toward the east during the afternoon by the sea breeze. This creates a "sloshing" effect which causes pollutants to remain in the Basin for several days. Air quality in the Basin is primarily influenced by meteorology and a wide range of emission sources, such as dense population centers, substantial vehicular traffic, and industry.

Air pollutant emissions in the Basin are generated primarily by stationary and mobile sources. Stationary sources can be divided into two major subcategories: point and area sources. Point sources occur at a specific location and are often identified by an exhaust vent or stack. Examples include boilers or combustion equipment that produce electricity or generate heat. Area sources are widely distributed and include such sources as residential and commercial water heaters, painting operations, lawn mowers, agricultural fields, landfills, and some consumer products. Mobile sources refer to emissions from motor vehicles, including tailpipe and evaporative emissions, and are classified as either on-road or off-road. On-road sources may be legally operated on roadways and highways. Off-road sources include aircraft, ships, trains, and self-propelled construction equipment. Air pollutants can also be generated by the natural environment, such as when high winds suspend fine dust particles.

2.1.1 Air Quality

Air Pollutants of Primary Concern

Primary criteria pollutants are emitted directly from a source (e.g., vehicle tailpipe, an exhaust stack of a factory, etc.) into the atmosphere. Primary criteria pollutants include carbon monoxide (CO), nitrogen dioxide (NO_2), particulate matter with diameters 10 micrometers and smaller (PM_{10}), particulate matter with diameters 2.5 micrometers and smaller ($PM_{2.5}$), sulfur dioxide (SO_2), and lead (Pb). Ozone (O_3) is considered a secondary criteria pollutant because it is created by atmospheric chemical and photochemical reactions between reactive organic gases (ROC) and nitrogen oxides (NO_X). The following subsections describe the characteristics, sources, and health and atmospheric effects of criteria air contaminants.

Ozone

Ozone is a highly oxidative unstable gas produced by a photochemical reaction (triggered by sunlight) between NO_X and reactive organic compounds, also referred to as volatile organic compounds [VOC]

or ROC.[5] ROC is composed of non-methane hydrocarbons (with specific exclusions), and NO_X is composed of different chemical combinations of nitrogen and oxygen, mainly nitric oxide (NO) and NO_2. NO_X is formed during the combustion of fuels, while ROC is formed during the combustion and evaporation of organic solvents. As a highly reactive molecule, ozone readily combines with multiple different atmosphere components. Consequently, high ozone levels tend to exist only while high ROC and NO_X levels are present to sustain the ozone formation process. Once the precursors have been depleted, ozone levels rapidly decline. Because these reactions occur on a regional rather than local scale, ozone is considered a regional pollutant. In addition, because ozone requires sunlight to form, it mainly occurs in concentrations considered serious between April and October. Groups most sensitive to ozone include children, the elderly, people with respiratory disorders, and people who exercise strenuously outdoors. Depending on the level of exposure, ozone can cause coughing and a sore or scratch throat; make it more difficult to breathe deeply and vigorously and cause pain when taking a deep breath; inflame and damage the airways; make the lungs more susceptible to infection; and aggravate lung diseases such as asthma, emphysema, and chronic bronchitis (United States Environmental Protection Agency [USEPA] 2022a).

Carbon Monoxide

Carbon monoxide (CO) is a localized pollutant found in high concentrations only near its source. The primary source of CO, a colorless, odorless, poisonous gas, is automobile traffic's incomplete combustion of petroleum fuels. Therefore, elevated concentrations are usually only found near areas of high traffic volumes. Other sources of CO include the incomplete combustion of petroleum fuels at power plants and fuel combustion from wood stoves and fireplaces during the winter. When CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease. People with pre-existing heart disease related conditions have a reduced ability to get oxygenated blood to their hearts in situations where they need more oxygen than usual. As a result, they are especially vulnerable to the effects of CO when exercising or under increased stress. Given the stressors on their heart, short-term exposure to elevated CO may result in reduced oxygen to the heart accompanied by chest pain, also known as angina (USEPA 2022a).

Nitrogen Dioxide

Nitrogen dioxide (NO_2) is a by-product of fuel combustion. The primary sources are motor vehicles, industrial boilers, and furnaces. The principal form of NO_x produced by combustion is NO, but NO reacts rapidly to form NO_2, creating the mixture of NO and NO_2, commonly called NO_X. NO_2 is a reactive, oxidizing gas and an acute irritant capable of damaging cell linings in the respiratory tract. Breathing air with a high concentration of NO_2 can irritate airways in the human respiratory system. Such exposures over short periods can aggravate respiratory diseases leading to respiratory symptoms (such as coughing, wheezing, or difficulty breathing), hospital admissions, and visits to emergency rooms. Longer exposures to elevated concentrations of NO_2 may contribute to the development of asthma and potentially increase susceptibility to respiratory infections. People with asthma and children and the elderly are generally at greater risk for the health effects of NO_2.

Additionally, NO_2 absorbs blue light and causes a reddish-brown cast to the atmosphere and reduced visibility. It can also contribute to the formation of ozone/smog and acid rain (USEPA 2022a).

[5] The CARB defines VOC, ROC and ROG similarly as "any compound of carbon excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate" with the exception that VOC are compounds that participate in atmospheric photochemical reactions. For the purposes of this analysis, ROC, ROG and VOC are considered comparable in terms of mass emissions, and the term ROC is used in this report since VCAPCD sets the threshold for ROC.

Sulfur Dioxide

Sulfur dioxide (SO_2) is included in a group of highly reactive gases known as sulfur oxides (SO_X). The largest sources of SO_2 emissions are from fossil fuel combustion at power plants (73 percent) and other industrial facilities (20 percent). Smaller sources of SO_2 emissions include industrial processes such as extracting metal from ore and burning fuels with a high sulfur content by locomotives, large ships, and off-road equipment. Short-term exposures to SO_2 can harm the human respiratory system and make breathing difficult. People with asthma, particularly children, are sensitive to these effects of SO_2 (USEPA 2022a).

Particulate Matter

Particulate matter with a diameter of 10 micrometers or less (PM_{10}) and particulate matter with a diameter of 2.5 micrometers or less in diameter ($PM_{2.5}$) are comprised of finely divided solids and liquids such as dust, soot, aerosols, fumes, and mists. Both PM_{10} and $PM_{2.5}$ are emitted into the atmosphere as by-products of fuel combustion and wind erosion of soil and unpaved roads. The atmosphere, through chemical reactions, can form particulate matter. The characteristics, sources, and potential health effects of PM_{10} and $PM_{2.5}$ can be very different. PM_{10} is generally associated with dust mobilized by wind and vehicles. In contrast, $PM_{2.5}$ is generally associated with combustion processes and formation in the atmosphere as a secondary pollutant through chemical reactions. PM_{10} can cause increased respiratory disease, lung damage, cancer, premature death, reduced visibility, and surface soiling. For $PM_{2.5}$, short-term exposures (up to 24 hours duration) have been associated with premature mortality, increased hospital admissions for heart or lung causes, acute and chronic bronchitis, asthma attacks, emergency room visits, respiratory symptoms, and restricted activity days. These adverse health effects have been reported primarily in infants, children, and older adults with preexisting heart or lung diseases (California Air Resources Board [CARB] 2022a).

Lead

Lead is a metal found naturally in the environment, as well as in manufacturing products. The major sources of lead emissions historically have been mobile and industrial. However, due to the USEPA's regulatory efforts to remove lead from gasoline, atmospheric lead concentrations have declined substantially over the past several decades. The most dramatic reductions in lead emissions occurred before 1990 due to the removal of lead from gasoline sold for most highway vehicles. Lead emissions were further reduced substantially between 1990 and 2008, with reductions occurring in the metals industries at least partly due to national emissions standards for hazardous air pollutants (USEPA 2013). As a result of phasing out leaded gasoline, metal processing is currently the primary source of lead emissions. The highest lead level in the air is generally found near lead smelters. Other stationary sources include waste incinerators, utilities, and lead-acid battery manufacturers. Lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems, and cardiovascular system, depending on exposure. Lead exposure also affects the oxygen-carrying capacity of blood. The lead effects most likely encountered in current populations are neurological in children. Infants and young children are susceptible to lead exposures, contributing to behavioral problems, learning deficits, and lowered intelligence quotient (USEPA 2022a).

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are a diverse group of air pollutants that may cause or contribute to an increase in deaths or serious illness, or that may pose a present or potential hazard to human health. TACs include both organic and inorganic

chemical substances that may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities. One of the main sources of TACs in California is diesel engine exhaust that contains solid material known as diesel particulate matter (DPM). More than 90 percent of DPM is less than one micrometer in diameter (about $1/70^{th}$ the diameter of a human hair), and thus, is a subset of $PM_{2.5}$. Because of their extremely small size, TACs can be inhaled and eventually trapped in the bronchial and alveolar regions of the lungs (CARB 2022a). TACs are different than criteria pollutants because ambient air quality standards have not been established for TACs. TACs occurring at extremely low levels may still cause health effects and it is typically difficult to identify levels of exposure that do not produce adverse health effects. TAC impacts are described by carcinogenic risk and by chronic (i.e., long duration) and acute (i.e., severe but of short duration) adverse effects on human health. People exposed to TACs at sufficient concentrations and durations may have an increased chance of getting cancer or experiencing other serious health effects. These health effects can include damage to the immune system, as well as neurological, reproductive (e.g., reduced fertility), developmental, respiratory, and other health issues (USEPA 2025a).

San Joaquin Valley Fever

San Joaquin Valley Fever (formally known as Coccidioidomycosis) is an infectious disease caused by the fungus *Coccidioides immitis*. San Joaquin Valley Fever (Valley Fever) is a disease of concern in the Basin with approximately 231 cases reported in Ventura County as of July 31, 2025 (California Department of Public Health 2025). The *Coccidioides* fungus resides in the soil in southwestern United States, northern Mexico, and parts of Central and South America. Infection is caused by inhalation of *Coccidioides immitis* spores that have become airborne when dry, dusty soil or dirt is disturbed by natural processes, such as wind or earthquakes, or by human-induced ground-disturbing activities, such as construction, farming, or other activities (VCAPCD 2003). About 60 percent of infected persons have no symptoms. The remainder develop flu-like symptoms that can last for a month and tiredness that can sometimes last for longer than a few weeks. A small percentage of infected persons (<1 percent) can develop disseminated disease that spreads outside the lungs to the brain, bone, and skin. Without proper treatment, this small percentage of persons infected with disseminated disease of Valley Fever can lead to severe pneumonia, meningitis, and even death. Symptoms may appear between one to four weeks after exposure (Los Angeles County Health Department 2013).

Diagnosis of Valley Fever is conducted through a sample of blood, other body fluid, or biopsy of affected tissue. Valley Fever is treatable with anti-fungal medicines and is not contagious. Once recovered from the disease, the individual is protected against further infection. Persons at highest risk from exposure are those with compromised immune systems, such as those with human immunodeficiency virus (HIV) and those with chronic pulmonary disease. Farmers, construction workers, and others who engage in activities that disturb the soil are at highest risk for Valley Fever. Infants, pregnant women, diabetics, people of African, Asian, Latino, or Filipino descent, and the elderly may be at increased risk for disseminated disease. Historically, people at risk for infection are individuals not already immune to the disease and whose jobs involve extensive contact with soil dust, such as construction or agricultural workers and archeologists (Los Angeles County Health Department 2013).

During drought years, the number of organisms competing with *C. immitis* decreases, and the remainder of alive *C. immitis* becomes dormant. When rain eventually occurs, the arthrocondia germinate and multiply more than usual because of a decrease in competing organisms. Later, the soil dries out in the summer and fall, and the fungi can become airborne and potentially infectious (Kirkland and Fierey 1996).

Sensitive Receptors

CARB and the Office of Environmental Health Hazard Assessment (OEHHA) have identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, infants (including in utero in the third trimester of pregnancy), and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis (CARB 2005; OEHHA 2015). Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved and are referred to as sensitive receptors. Examples of these sensitive receptors are residences, schools, hospitals, religious facilities, and daycare centers. The nearest sensitive receptors to the site include single-family residences adjacent to the northern and southern project boundary.

2.1.2 Greenhouse Gas

Gases that trap heat in the atmosphere are known as GHGs. GHGs allow sunlight to enter the atmosphere but trap a portion of the outward-bound infrared radiation that warms the air. The process is similar to the effect greenhouses have in raising the internal temperature of the structure. Both natural processes and human activities emit GHGs. The accumulation of GHGs in the atmosphere regulates the Earth's temperature, but emissions from human activities (such as fossil fuel-based electricity production and the use of motor vehicles) have elevated the concentration of GHGs in the atmosphere. Scientists agree that this accumulation of GHGs has contributed to an increase in the temperature of the Earth's atmosphere and to global climate change. Global climate change is a change in the average weather on Earth that can be measured by wind patterns, storms, precipitation, and temperature. Although there is disagreement as to the rate of global climate change and the extent of the impacts attributable to human activities, most scientists agree there is a direct link between increased emissions of GHGs and long-term global temperature increases.

The gases widely seen as the principal contributors to human-induced climate change include carbon dioxide (CO_2), methane (CH_4), nitrous oxides (N_2O), fluorinated gases such as hydrofluorocarbons (HFCs) and perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). Water vapor is excluded from the list of GHGs because it is short-lived in the atmosphere, and natural processes, such as oceanic evaporation, largely determine its atmospheric concentrations.

GHGs are emitted by natural processes and human activities. Of these gases, CO_2 and CH_4 are emitted in the greatest quantities from human activities. Emissions of CO_2 are usually by-products of fossil fuel combustion, and CH_4 results from off-gassing associated with agricultural practices and landfills. Human-made GHGs, many of which have greater heat-absorption potential than CO_2, include fluorinated gases and SF_6.

Different types of GHGs have varying global warming potentials (GWP). The GWP of a GHG is the potential of a gas or aerosol to trap heat in the atmosphere over a specified timescale (generally, 100 years). Because GHGs absorb different amounts of heat, a common reference gas (CO_2) is used to relate the amount of heat absorbed to the amount of the gas emitted, referred to as "carbon dioxide equivalent" (CO_2e), which is the amount of GHG emitted multiplied by its GWP. Carbon dioxide has a 100-year GWP of one. By contrast, methane has a GWP of 30, meaning its global warming effect is 30 times greater than CO_2 on a molecule per molecule basis (IPCC 2021).[6]

[6] The Intergovernmental Panel on Climate Change's (2021) *Sixth Assessment Report* determined that methane has a GWP of 30. However, the 2017 Climate Change Scoping Plan published by the California Air Resources Board uses a GWP of 25 for methane, consistent with the Intergovernmental Panel on Climate Change's (2007) *Fourth Assessment Report*. Therefore, this analysis utilizes the GWPs from the Fourth Assessment Report.

Greenhouse Gases

Carbon Dioxide

Carbon dioxide (CO_2) is the primary GHG emitted through human activities. In 2020, CO_2 accounted for about 79 percent of all U.S. GHG emissions from human activities. CO_2 is naturally present in the atmosphere as part of the Earth's carbon cycle (the natural circulation of carbon among the atmosphere, oceans, soil, plants, and animals). Human activities are altering the carbon cycle–both by adding more CO_2 to the atmosphere, and by influencing the ability of natural sinks, like forests and soils, to remove and store CO_2 from the atmosphere. While CO_2 emissions come from a variety of natural sources, human-related emissions are responsible for the increase that has occurred in the atmosphere since the industrial revolution (USEPA 2022a).

Methane

Methane (CH_4) is a colorless, odorless gas and is the major component of natural gas. In 2020, methane accounted for about 11 percent of all U.S. GHG emissions from human activities. Human activities emitting methane include leaks from natural gas systems and the raising of livestock. Methane is also emitted by natural sources such as natural wetlands. In addition, natural processes in soil and chemical reactions in the atmosphere help remove CH_4 from the atmosphere. Methane's lifetime in the atmosphere is much shorter than carbon dioxide (CO_2), but CH_4 is more efficient at trapping radiation than CO_2. Pound for pound, the comparative impact of CH_4 is 25 times greater than CO_2 over a 100-year period (USEPA 2022a).

Nitrous Oxide

Nitrous oxide (N_2O) is a clear, colorless gas with a slightly sweet odor. In 2020, nitrous oxide accounted for about seven percent of all U.S. GHG emissions from human activities. Human activities such as agriculture, fuel combustion, wastewater management, and industrial processes are increasing the amount of N_2O in the atmosphere. Nitrous oxide is also naturally present in the atmosphere as part of the Earth's nitrogen cycle and has a variety of natural sources. Nitrous oxide molecules stay in the atmosphere for an average of 114 years before being removed by a sink or destroyed through chemical reactions. The impact of one pound of N_2O on warming the atmosphere is almost 300 times that of one pound of carbon dioxide (USEPA 2022a).

Fluorinated Gases (HFCs, PFCs and SF_6)

Unlike many other GHGs, fluorinated gases have no natural sources and only come from human-related activities. They are emitted through their use as substitutes for ozone-depleting substances (e.g., as refrigerants) and through a variety of industrial processes such as aluminum and semiconductor manufacturing. Many fluorinated gases have very high GWPs relative to other GHGs, so small atmospheric concentrations can have disproportionately large effects on global temperatures. They can also have long atmospheric lifetimes, in some cases, lasting thousands of years. Like other long-lived GHGs, most fluorinated gases are well-mixed in the atmosphere, spreading around the world after they are emitted. Many fluorinated gases are removed from the atmosphere only when they are destroyed by sunlight in the far upper atmosphere. In general, fluorinated gases are the most potent and longest lasting type of GHGs emitted by human activities (USEPA 2022a).

Greenhouse Gas Emissions Inventory

Global Emissions Inventory

In 2021, worldwide anthropogenic GHG emissions totaled 33,000 million metric tons (MMT) of CO_2e, which is a 48 percent increase from 1990 GHG levels (USEPA 2025b). Additionally, in 2019, worldwide anthropogenic emissions totaled 49,758 million metric tons (MT) of CO_2e, which is a 53 percent increase from 1990 GHG levels. Specifically, 74.4 percent of CO_2e is from CO_2, 17.3 percent from CH_4, 6.2 percent from N_2O, and 2.1 percent from fluorinated gases were emitted in 2019. The largest source of GHG emissions were energy production and use (including fuels used by vehicles and buildings), which accounted for 73.2 percent of the global GHG emissions. Agriculture uses and industrial processes contributed 18.4 percent and 5.2 percent, respectively. Waste sources contributed to 3.2 percent (Our World in Data 2024).

United States Emissions Inventory

Total U.S. GHG emissions were 6,343 MMT of CO_2e in 2022. Emissions increased by 1 percent from 2021 to 2022; however, GHG emissions in 2022 (after accounting for sequestration from the land sector) were 17 percent below 2005 levels. The increase from 2021 to 2022 is largely due to increased fossil fuel consumption from increased energy use, due in part to the continued rebound in economic activity after the height of the COVID-19 pandemic.

In 2022, the commercial and residential and the industrial end-use sectors accounted for 31 percent and 30 percent, respectively, of nationwide GHG emissions while the transportation and agriculture end-use sectors accounted for 29 percent and 10 percent of nationwide GHG emissions, respectively, with electricity emissions distributed among the various sectors (USEPA 2025c).

California Emissions Inventory

Based on the CARB California Greenhouse Gas Inventory for 2000-2022, California produced 371.1 MMT of CO_2e in 2022, which is 9.3 $MMTCO_2e$ (2.4 percent) lower than in 2021 (380.4 $MMTCO_2e$). The major source of GHG emissions in California is the transportation sector, which comprises 39 percent of the State of California's total GHG emissions. The industrial sector is the second largest source, comprising 23 percent of the State's GHG emissions, while electric power accounts for approximately 16 percent (CARB 2022b). The magnitude of California's total GHG emissions is due in part to its large size and large population compared to other states. However, a factor that reduces California's per capita fuel use and GHG emissions as compared to other states is its relatively mild climate. In 2016, the State of California (State) achieved its 2020 GHG emission reduction target of reducing emissions to 1990 levels as emissions fell below 431 MMT of CO_2e (CARB 2022b). The annual 2030 statewide target emissions level is 260 MMT of CO_2e, with the long-term goal of carbon neutrality by 2045 (CARB 2017; CARB 2022c).

Potential Effects of Climate Change

Globally, climate change has the potential to affect numerous environmental resources though impacts related to future air temperatures and precipitation patterns. Scientific modeling predicts that continued GHG emissions at or above current rates would induce more extreme climate changes during the 21st century than were observed during the 20th century. Each of the past three decades has been warmer than all the previous decades in the instrumental record, with 2013 to 2021 among warmest years from 1880 to 2021. The average global land and ocean surface temperature for January to December 2021 was 0.84°C (1.51 degrees Fahrenheit [°F]) above the 20th century average of 13.9°C

(57.0°F) (National Oceanic and Atmospheric Administration 2025). Furthermore, several independently analyzed data records of global and regional Land-Surface Air Temperature (LSAT) obtained from station observations jointly indicate that LSAT and sea surface temperatures have increased. Due to past and current activities, anthropogenic GHG emissions are increasing global mean surface temperature at a rate of 0.2°C per decade. In addition to these findings, there are identifiable signs that global warming is currently taking place, including substantial ice loss in the Arctic over the past two decades (IPCC 2014; IPCC2018).

Potential impacts of climate change in California may include reduced water supply from snowpack, sea level rise, more extreme heat days per year, more large forest fires, and more drought years (California Natural Resource Agency 2018). *California's Fourth Climate Change Assessment* includes regional reports that summarize climate impacts and adaptation solutions for nine regions of the State and regionally specific climate change case studies. However, while there is growing scientific consensus about the possible effects of climate change at a global and statewide level, current scientific modeling tools are unable to predict what local impacts may occur with a similar degree of accuracy (California Natural Resource Agency 2018). A summary follows of some of the potential effects that climate change could generate in California.

Air Quality

Scientists project that the annual average maximum daily temperatures in California could rise by 2.4 to 3.2°C (4.3°F to 5.8°F) in the next 50 years and by 3.1 to 4.9°C (5.6°F to 8.8°F) in the next century (California Natural Resource Agency 2018). Higher temperatures are conducive to air pollution formation, and rising temperatures could therefore result in worsened air quality in California. As a result, climate change may increase the concentration of ground-level ozone, but the magnitude of the effect, and therefore its indirect effects, are uncertain. In addition, as temperatures have increased in recent years, the area burned by wildfires throughout the state has increased, and wildfires have occurred at higher elevations in the Sierra Nevada Mountains (California Natural Resource Agency 2018). If higher temperatures continue to be accompanied by an increase in the incidence and extent of large wildfires, air quality could worsen. Severe heat accompanied by drier conditions and poor air quality could increase the number of heat-related deaths, illnesses, and asthma attacks throughout the state. With increasing temperatures, shifting weather patterns, longer dry seasons, and more dry fuel loads, the frequency of large wildfires and area burned is expected to continue to increase. (California Natural Resources Agency 2024).

Water Supply

Analysis of paleoclimatic data (such as tree-ring reconstructions of stream flow and precipitation) indicates a history of naturally and widely varying hydrologic conditions in California and the west, including a pattern of recurring and extended droughts. Uncertainty remains with respect to the overall impact of climate change on future precipitation trends and water supplies in California. Year-to-year variability in statewide precipitation levels has increased since 1980, meaning that wet and dry precipitation extremes have become more common (Office of Environmental Health Hazard Assessment and California Environmental Protection Agency 2018). This uncertainty regarding future precipitation trends complicates the analysis of future water demand, especially where the relationship between climate change and its potential effect on water demand is not well understood. The average early spring snowpack in the western U.S., including the Sierra Nevada Mountains, decreased by about 10 percent during the last century. During the same period, sea level rose over 0.15 meter along the central and southern California coasts (California Department of Water 2018). The Sierra Nevada Mountains snowpack provides the majority of California's water supply as snow

that accumulates during wet winters is released slowly during the dry months of spring and summer. A warmer climate is predicted to reduce the fraction of precipitation that falls as snow and the amount of snowfall at lower elevations, thereby reducing the total snowpack. Projections indicate that average spring snowpack in the Sierra Nevada and other mountain catchments in central and northern California will decline by approximately 66 percent from its historical average by 2050 (California Natural Resource Agency 2018).

Hydrology and Sea Level Rise

Climate change could affect the intensity and frequency of storms and flooding (California Natural Resource Agency 2018). Furthermore, climate change could induce substantial sea level rise in the coming century. Rising sea level increases the likelihood of and risk from flooding. The rate of increase of global mean sea levels between 1993 to 2020, observed by satellites, is approximately 3.3 millimeters per year, double the twentieth century trend of 1.6 millimeters per year (World Meteorological Organization 2023; National Aeronautics and Space Administration 2020). Global mean sea levels in 2013 were about 0.23 meter higher than those of 1880 (National Aeronautics and Space Administration 2020). Sea levels are rising faster now than in the previous two millennia, and the rise will probably accelerate, even with robust GHG emission control measures. The most recent IPCC report predicts a mean sea level rise ranging between 0.25 to 0 1.01 meters by 2100 with the sea level ranges dependent on a low, intermediate, or high GHG emissions scenario (IPCC 2021). A rise in sea levels could erode 31 to 67 percent of southern California beaches and cause flooding of approximately 370 miles of coastal highways during 100-year storm events. Sea level rise would also jeopardize California's water supply due to saltwater intrusion and induce groundwater flooding and/or exposure of buried infrastructure (California Natural Resource Agency 2018). Furthermore, increased storm intensity and frequency could affect the ability of flood-control facilities, including levees, to handle storm events.

Agriculture

California has a nearly $60 billion annual agricultural industry that produces over a third of U.S. vegetables and two-thirds of the U.S. fruits and nuts (California Department of Food and Agriculture 2025). Higher CO_2 levels can stimulate plant production and increase plant water-use efficiency. However, if temperatures rise and drier conditions prevail, certain regions of agricultural production could experience water shortages of up to 16 percent, which would increase water demand as hotter conditions lead to the loss of soil moisture. In addition, crop yield could be threatened by water-induced stress and extreme heat waves, and plants may be susceptible to new and changing pest and disease outbreaks (California Natural Resource Agency 2018). Temperature increases could also change the time of year certain crops, such as wine grapes, bloom or ripen, and thereby affect crop quality (California Climate Change Center 2006).

Ecosystems and Wildlife

Climate change and the potential resultant changes in weather patterns could have ecological effects on the global and local scales. Soil moisture is likely to decline in many regions with higher temperatures, and intense rainstorms are likely to become more frequent. Rising temperatures could have four major impacts on plants and animals: timing of ecological events; geographic distribution and range of species; species composition and the incidence of nonnative species within communities; and ecosystem processes, such as carbon cycling and storage (Parmesan 2006; California Natural Resource Agency 2018).

2.2 Regulatory Setting

2.2.1 Air Quality

Federal and California Clean Air Acts

The federal and State governments have established ambient air quality standards for the protection of public health. The USEPA is the federal agency designated to administer air quality regulation, while the CARB is the State equivalent within the California Environmental Protection Agency (CalEPA). Regional-level air quality management districts provide local management of air quality. CARB has established State-level air quality standards and is responsible for the control of mobile emission sources, while the local air districts are responsible for enforcing standards and regulating stationary sources. CARB has established 15 air basins statewide, including the SCCAB.

The USEPA has set primary national ambient air quality standards (NAAQS) for ozone, CO, NO_2, SO_2, PM_{10}, $PM_{2.5}$, and lead. Primary standards are those levels of air quality deemed necessary, with an adequate margin of safety, to protect public health. In addition, California has established health-based ambient air quality standards (known as the California ambient air quality standards [CAAQS]) for these and other pollutants, some of which are more stringent than the federal standards. Table 3 lists the current federal and State standards for regulated pollutants.

Ventura County Air Pollution Control District (VCAPCD) is the designated air quality control agency in the Basin, which is designated nonattainment for the 8-hour federal and State ozone standard, federal hourly ozone standard and State PM_{10} standards (CARB 2022c). The Basin is designated unclassifiable or in attainment for all other federal and State standards (CARB 2022c; USEPA 2022b).

Table 3 Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	Federal Primary Standards	California Standards
Ozone	1-Hour	–	0.09 ppm
	8-Hour	0.070 ppm	0.070 ppm
CO	8-Hour	9.0 ppm	9.0 ppm
	1-Hour	35.0 ppm	20.0 ppm
NO_2	Annual	0.053 ppm	0.030 ppm
	1-Hour	0.100 ppm	0.18 ppm
SO_2	Annual	0.030 ppm	–
	24-Hour	0.14 ppm	0.04 ppm
	1-Hour	0.075 ppm	0.25 ppm
PM_{10}	Annual	–	20 µg/m^3
	24-Hour	150 µg/m^3	50 µg/m^3
$PM_{2.5}$	Annual	9 µg/m^3	12 µg/m^3
	24-Hour	35 µg/m^3	–
Lead	30-Day Average	–	1.5 µg/m^3
	3-Month Average	0.15 µg/m^3	–
Visibility Reducing Particles	8-Hour	–	Extinction of 0.23 per kilometer
Sulfates	24-Hour	–	25 µg/m^3
Hydrogen Sulfide	1-Hour	–	0.03 ppm (42 µg/m^3)
Vinyl Chloride	24-Hour	–	0.01 ppm (26 µg/m^3)

ppm = parts per million; µg/m^3 = micrograms per cubic meter; NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = particulate matter with a diameter no more than 10 microns; $PM_{2.5}$ = particulate matter with a diameter no more than 2.5 microns

Source: CARB 2024a and CARB 2024b

Construction Equipment Fuel Efficiency Standard

The USEPA sets emission standards for construction equipment. The first federal standards (Tier 1) were adopted in 1994 for all off-road engines over 50 horsepower (hp) and were phased in by 2000. A new standard was adopted in 1998 that introduced Tier 1 for all equipment below 50 hp and established the Tier 2 and Tier 3 standards. The Tier 2 and Tier 3 standards were phased in by 2008 for all equipment. The current iteration of emissions standards for construction equipment are the Tier 4 efficiency requirements, which are contained in 40 Code of Federal Regulations (CFR) Parts 1039, 1065, and 1068 (originally adopted in 69 Federal Register [FR] 38958 [June 29, 2004], and most recently updated in 2014 [79 FR 46356]). Emissions requirements for new off-road Tier 4 vehicles were completely phased in by the end of 2015.

State Implementation Plan

The State Implementation Plan (SIP) is a collection of documents that set forth the State's strategies for achieving the NAAQS. In California, the SIP is a compilation of new and previously submitted plans, programs (such as monitoring, modeling, and permitting), district rules, State regulations, and federal controls. CARB is the lead agency for all purposes related to the SIP under State law. Local air quality management districts and other agencies, such as the California Department of Pesticide Regulation and the California Bureau of Automotive Repair, prepare SIP elements and submit them to CARB for

review and approval. CARB then forwards the SIP revisions to the USEPA for approval and publication in the Federal Register. The items included in the California SIP are listed in 40 CFR 52.220.

As the regional air quality management district, the VCAPCD is responsible for preparing and implementing the portion of the SIP applicable to the portion of the Basin within its jurisdiction. The air quality management district for each region adopts rules, regulations, and programs to attain federal and State air quality standards and appropriates money (including permit fees) to achieve these standards. In addition, the following California Code of Resources (CCR) sections would be applicable to the project:

- **Engine Idling.** In accordance with Section 2485 of CCR Title 13, the idling of all diesel-fueled commercial vehicles (weighing over 10,000 pounds) during construction shall be limited to five minutes at any location.
- **Emission Standards.** In accordance with Section 93115 of CCR Title 17, operation of any stationary, diesel-fueled, compression-ignition engines shall meet specified fuel and fuel additive requirements and emission standards.

Regional and Local Air Quality Regulations

2022 Ventura County Air Quality Management Plan

Under State law, air quality management districts are required to prepare a plan for air quality improvement for pollutants for which each district is in non-compliance. The VCAPCD adopted the 2022 Ventura County Air Quality Management Plan (AQMP) in December 2022.

The 2022 AQMP presents a combined local and state clean air strategy based on concurrent ROC and NO_X emission reductions to bring Ventura County into attainment of the 2015 federal 8-hour ozone standard. The 2022 AQMP control strategy consists of a local component implemented by the VCAPCD and a combined state and federal component implemented by CARB and EPA. The local strategy includes emission control measures carried forward from previous Ventura County clean air plans in addition to new study emission control measures. The AQMP also includes a transportation conformity budget that sets the maximum amount of on-road motor vehicle emissions produced while continuing to demonstrate progress towards attainment (VCAPCD 2022). According to the VCAPCD guidelines, in addition to the assessment of criteria pollutants, the lead agency should consider San Joaquin Valley Fever factors that are applicable to the proposed project or the project site. Based on these or other factors, if a lead agency determines that a project may create a significant Valley Fever impact, the VCAPCD recommends that the lead agency consider the Valley Fever mitigation measures listed in the VCAPCD guidelines to minimize fugitive dust as well as minimizing worker exposure.

Ventura County Air Pollution Control District Rules

To minimize potential impacts from project emissions, the VCAPCD implements rules and regulations for emissions that may be generated by various uses and activities. The rules and regulations detail pollution-reduction measures that must be implemented during construction and operation of projects. Rules and regulations relevant to the project include the following:

- **Rule 50 (Opacity).** This rule sets opacity standards on the discharge from sources of air contaminants. This rule would apply during construction of the project.

- **Rule 51 (Nuisance).** This rule prohibits any person from discharging air contaminants or any other material from a source that would cause injury, detriment, nuisance, or annoyance to any considerable number of persons or the public or which endangers the comfort, health, safety, or repose to any considerable number of persons or the public. The rule would apply during construction and operational activities.
- **Rule 55 (Fugitive Dust).** This rule requires fugitive dust generators, including construction and demolition projects, to implement control measures limiting the amount of dust from vehicle track-out, earth moving, bulk material handling, and truck hauling activities. The rule would apply during construction activities.
- **Rule 55.1 (Paved Roads and Unpaved Roads).** This rule requires fugitive dust generators to begin the removal of visible roadway accumulation within 72 hours of any written notification from the VCAPCD. The use of blowers is expressly prohibited under any circumstances. This rule also requires controls to limit the amount of dust from any construction activity or any earthmoving activity on a public unpaved road. This rule would apply during construction activities.
- **Rule 55.2 (Street Sweeping Equipment).** This rule requires the use of PM_{10}-efficient street sweepers for routine street sweeping and for removing vehicle track-out pursuant to Rule 55. This rule would apply during construction activities.
- **Rule 62.7 (Asbestos—Demolition and Renovation).** This rule applies to demolition and renovation activities that disturb asbestos-containing materials (ACM). It requires advance notification to VCAPCD, asbestos training for workers, and strict work practices to prevent asbestos emissions. The project would be required to comply with this rule during construction if ACM is suspected within the existing residence to be demolished.
- **Rule 74.2 (Architectural Coating)**. This rule sets limits on the ROC content of architectural coatings. Non-flat coatings are limited to 50 grams per liter of ROC content, flat coatings are limited to 50 grams per liter of ROC content and traffic marking coatings are limited to 100 grams per liter of ROC content. The project would be required to comply with this rule during both construction and operation.
- **Rule 74.4 (Cutback Asphalt).** This rule sets limits on the type of application and reactive organic gas (ROC) content of cutback and emulsified asphalt. The project would be required to comply with the type of application and ROC content standards set forth in this rule.

For the purposes of air quality analysis under CEQA, the VCAPCD guidelines (2003) provides "ROC and NO_X [nitrogen oxides] thresholds that the VCAPCD has determined will individually and cumulatively jeopardize attainment of the federal one-hour ozone standard, and thus have a significant adverse impact on air quality in Ventura County." These thresholds are as follows:

  - ROC: 25 pounds/day
  - NO_X: 25 pounds/day

According to the VCAPCD guidelines, construction-related emissions (including portable engines and portable engine-driven equipment subject to the CARB Statewide Portable Equipment Registration Program and used for construction operations or repair and maintenance activities) of ROC and NO_X are not counted towards the two significance thresholds, since these emissions are temporary. However, the VCAPCD guidelines state that if a project's estimated construction-related emissions of ROC and NO_X would exceed 25 pounds/day, VCAPCD recommends the following measures to mitigate ozone precursor emissions from construction motor vehicles:

- Minimize equipment idling time;

- Maintain equipment engines in good condition and in proper tune as per manufacturers' specifications;
- Lengthen the construction period during smog season (May through October), to minimize the number of vehicles and equipment operating at the same time;
- Use alternatively fueled construction equipment, such as compressed natural gas, liquefied natural gas, or electric, if feasible; and
- Utilize USEPA Tier 3 and Tier 4 off-road construction equipment, if feasible.

Ventura County 2040 General Plan

Several Elements of the Ventura County 2040 General Plan recognize the importance of achieving regional air quality objectives. The 2040 General Plan includes the following policies related to air quality:

CIRCULATION, TRANSPORTATION, AND MOBILITY ELEMENT

- **Policy CTM-2.11: Efficient Land Use Patterns.** The County shall establish land use patterns that promote shorter travel distances between residences, employment centers, and retail and service-oriented uses to support the use of public transportation, walking, bicycling, and other forms of transportation that reduce reliance on single-passenger automobile trips.
- **Policy CTM-4.1: Reduce VMT.** The County shall work with Caltrans and VCTC to reduce VMT by:
  - facilitating the efficient use of existing transportation facilities,
  - striving to provide viable modal choices that make driving alone an option rather than a necessity,
  - supporting variable work schedules to reduce peak period VMT, and
  - providing more direct routes for pedestrians and bicyclists
- **Policy CTM-4.2: Alternative Transportation.** The County shall encourage bicycling, walking, public transportation, and other forms of alternative transportation to reduce VMT, traffic congestion, and greenhouse gas emissions.
- **Policy CTM-6.1: Routine Use of Alternative Transportation Options.** The County shall support the integration of emerging technologies that increase the routine use of alternative transportation options to decrease single-passenger automobile travel.

PUBLIC FACILITIES, SERVICES, AND INFRASTRUCTURE ELEMENT

- **Policy PFS-2.5: County Employee Trip Reduction.** The County shall encourage its employees to reduce the number and distance of single-occupancy vehicle work trips.
- **Policy PFS-2.6: County Alternative Fuel Vehicle Purchases.** The County shall review market-available technologies for alternative fuel vehicles and prioritize purchase of vehicles to reduce greenhouse gas emissions where economically feasible.

HAZARDS AND SAFETY ELEMENT

- **Policy HAZ-10.1: Air Pollutant Reduction.** The County shall strive to reduce air pollutant from stationary and mobile sources to protect human health and welfare, focusing efforts on shifting patterns and practices that contribute to the areas with the highest pollution exposures and health impacts.

- **Policy HAZ-10.2: Air Quality Management Plan Consistency.** The County shall prohibit discretionary development that is inconsistent with the most recent adopted AQMP, unless the Board of Supervisors adopts a statement of overriding considerations.
- **Policy HAZ-10.3: Air Pollution Control District Rule and Permit Compliance.** The County shall ensure that discretionary development subject to VCAPCD permit authority complies with all applicable APCD rules and permit requirements, including the use of Best Available Control Technology (BACT) as determined by the VCAPCD.
- **Policy HAZ-10.4: Engagement with Air Quality Management Plan.** When the VCAPCD updates the AQMP, the County shall actively engage continuously and throughout the process.
- **Policy HAZ-10.5: Air Pollution Impact Mitigation Measures for Discretionary Development.** The County shall work with applicants for discretionary development projects to incorporate bike facilities, solar water heating, solar space heating, incorporation of electric appliances and equipment, and the use of zero and/or near zero emission vehicles and other measures to reduce air pollution impacts and reduce greenhouse gas emissions.
- **Policy HAZ-10.6: Transportation Control Measures Programs.** The County shall continue to work with the VCAPCD and VCTC to develop and implement Transportation Control Measures (TCM) programs consistent with the AQMP to facilitate public transit and alternative transportation modes within the county.
- **Policy HAZ-10.7: Fuel Efficient County Vehicles.** When purchasing new County vehicles, the County shall give strong preference to fuel efficient vehicles, include the use of zero emission vehicles when feasible.
- **Policy HAZ-10.8: Alternative Transportation Modes.** The County shall promote alternative modes of transportation that reduce single-occupancy vehicle (SOV) travel and enhance "last-mile" transportation options to improve air quality.
- **Policy HAZ-10.9: Mitigation of Objectionable Odors.** The County shall require that discretionary development which will create objectionable odors that could affect a substantial number of people are appropriately mitigated. The project, pursuant to state law, shall be required to operate in accordance with the Rules and Regulations of the VCAPCD, with emphasis on Rule 51, Nuisance throughout the life of the permit.
- **Policy HAZ-10.11: Air Quality Assessment Guidelines.** In evaluating air quality impacts, the County shall consider total emissions from both stationary and mobile sources, as required by the California Environmental Quality Act. The County shall evaluate discretionary development for air quality impacts using the Air Quality Assessment Guidelines as adopted by the Ventura County Air Pollution Control District (APCD), except that emissions from APCD-permitted sources shall also be included in the analysis. The County shall revise the Initial Study Assessment Guidelines to implement this policy.
- **Policy HAZ-10.12: Conditions for Air Quality Impacts.** The County shall require that discretionary development that would have a significant adverse air quality impact shall only be approved if it is conditioned with all reasonable mitigation measures to avoid, minimize or compensate (offset) for the air quality impact. The use of innovative methods and technologies to minimize air pollution impact shall be encouraged in project design.

Current Air Quality

VCAPCD operates a network of air quality monitoring stations throughout the Ventura County portion of the Basin. The purpose of the monitoring stations is to measure ambient concentrations of

pollutants and determine whether ambient air quality meets the California and federal standards. The monitoring station closest to the project site is the Ojai – East Ojai Ave station at 8.8 miles northeast of the project site. However, the El Rio- Rio Mesa School #2 site, located just under 10 miles to the southeast, is a more representative geography and therefore as used for the determining the current air quality. The El Rio site is located at 545 Central Ave, El Rio, CA.

Table 4 indicates the number of days that each of the federal and State standards has been exceeded at monitoring stations near the project site in each of the last three years for which data is available (2021 to 2023). In the vicinity of the project site, the federal PM_{10} standards were exceeded in 2021 and 2023 and State PM_{10} standards were exceeded in all 3 monitoring years. No other exceedances were recorded for other pollutants during the 2021 to 2023 timeframe. Information regarding CO and SO_2 concentrations is not available from any of the monitoring stations in the County. Monitoring ceased throughout Ventura County for these pollutants in 2004 because of the low levels of CO and SO_2 recorded (VCAPCD 2007; CARB 2016).

Table 4 Annual Ambient Air Quality Data from Nearest Monitoring Stations

Pollutant	2021	2022	2023
Ozone (ppm), Worst 1-Hour	0.073	0.077	0.071
Number of days above CAAQS (>0.09 ppm)	0	0	0
Number of days above NAAQS (>0.12 ppm)	0	0	0
Ozone (ppm), Worst 8-Hour Average	0.059	0.063	0.058
Number of days above CAAQS (>0.070 ppm)	0	0	0
Number of days above NAAQS (>0.070 ppm)	0	0	0
Nitrogen Dioxide (ppm), Worst 1-Hour	0.033	0.032	0.027
Number of days above CAAQS (>0.180 ppm)	0	0	0
Number of days above NAAQS (>0.100 ppm)	0	0	0
Particulate Matter <10 microns ($\mu g/m^3$), Worst 24 Hours	337	57.9	102.8
Number of days above CAAQS (>50 $\mu g/m^3$)	12	3	7
Number of days above NAAQS (>150 $\mu g/m^3$)	1	0	0
Particulate Matter <2.5 microns ($\mu g/m^3$), Worst 24 Hours	37.7	18.5	24.5
Number of days above NAAQS (>35 $\mu g/m^3$)	0	0	0

ppm = parts per million; $\mu g/m^3$ = micrograms per cubic meter; CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard

2.2.2 Greenhouse Gas Emissions

Federal Regulations

Federal Clean Air Act

The U.S. Supreme Court determined in *Massachusetts et al. v. Environmental Protection Agency et al.* ([2007] 549 U.S. 05-1120) that the USEPA has the authority to regulate motor vehicle GHG emissions under the federal Clean Air Act (CAA). The USEPA issued a Final Rule for mandatory reporting of GHG emissions in October 2009. This Final Rule applies to fossil fuel suppliers, industrial gas suppliers,

direct GHG emitters, and manufacturers of heavy-duty and off-road vehicles and vehicle engines and requires annual reporting of emissions. In 2012, the USEPA issued a Final Rule that established the GHG permitting thresholds that determine when CAA permits under the New Source Review Prevention of Significant Deterioration and Title V Operating Permit programs are required for new and existing industrial facilities.

In *Utility Air Regulatory Group v. Environmental Protection Agency* (134 Supreme Court 2427 [2014]), the U.S. Supreme Court held the USEPA may not treat GHGs as an air pollutant for purposes of determining whether a source can be considered a major source required to obtain a Prevention of Significant Deterioration or Title V permit. The Court also held that Prevention of Significant Deterioration permits otherwise required based on emissions of other pollutants may continue to require limitations on GHG emissions based on the application of Best Available Control Technology.

Safer Affordable Fuel-Efficient Vehicles Rule

Refer to Section 2.2.1, *Air Quality*, in the Regulatory Section, for a discussion of the Safer Affordable Fuel-Efficient Vehicles Rule.

State Regulations

CARB is responsible for the coordination and oversight of State and local air pollution control programs in California. There are numerous regulations aimed at reducing the state's GHG emissions. These initiatives are summarized below.

Assembly Bill (AB) 1493 (2002), California's Advanced Clean Cars program (referred to as "Pavley"), requires CARB to develop and adopt regulations to achieve "the maximum feasible and cost-effective reduction of GHG emissions from motor vehicles." On June 30, 2009, the USEPA granted the waiver of CAA preemption to California for its GHG emission standards for motor vehicles, beginning with the 2009 model year, which allows California to implement more stringent vehicle emission standards than those promulgated by the USEPA. Pavley I regulates model years from 2009 to 2016 and Pavley II, now referred to as "LEV (Low Emission Vehicle) III GHG," regulates model years from 2017 to 2025. The Advanced Clean Cars program coordinates the goals of the LEV, Zero Emissions Vehicles (ZEV), and Clean Fuels Outlet programs and would provide major reductions in GHG emissions. By 2025, the rules will be fully implemented, and new automobiles will emit 34 percent fewer GHGs and 75 percent fewer smog-forming emissions from their model year 2016 levels.

California Global Warming Solutions Act of 2006 (Assembly Bill 32, Senate Bill 32, and Assembly Bill 1279)

The "California Global Warming Solutions Act of 2006," (AB 32), outlines California's major legislative initiative for reducing GHG emissions. AB 32 codifies the statewide goal of reducing GHG emissions to 1990 levels by 2020 and requires CARB to prepare a Scoping Plan that outlines the main state strategies for reducing GHG emissions to meet the 2020 deadline. In addition, AB 32 requires CARB to adopt regulations to require reporting and verification of statewide GHG emissions. Based on this guidance, CARB approved a 1990 statewide GHG level and 2020 target of 431 MMT CO_2e, which was achieved in 2016. CARB approved the Scoping Plan on December 11, 2008, which included GHG emission reduction strategies related to energy efficiency, water use, and recycling and solid waste, among others (CARB 2008).

CARB approved the 2013 Scoping Plan update in May 2014 (CARB 2014). The update defined the CARB's climate change priorities for the next five years, set the groundwork to reach post-2020

statewide goals, and highlighted California's progress toward meeting the "near-term" 2020 GHG emission reduction goals defined in the original Scoping Plan.

On September 8, 2016, the governor signed Senate Bill (SB) 32 into law, extending the California Global Warming Solutions Act of 2006 by requiring the state to further reduce GHG emissions to 40 percent below 1990 levels by 2030 (the other provisions of AB 32 remain unchanged). On December 14, 2017, the CARB adopted the 2017 Scoping Plan, which provides a framework for achieving the 2030 target. The 2017 Scoping Plan relies on the continuation and expansion of existing policies and regulations, such as the Cap-and-Trade Program, and implementation of recently adopted policies and legislation, such as SB 1383 and SB 100. The 2017 Scoping Plan also puts an increased emphasis on innovation, adoption of existing technology, and strategic investment to support its strategies. As with the 2013 Scoping Plan update, the 2017 Scoping Plan does not provide project-level thresholds for land use development. Instead, it recommends that local governments adopt policies and locally appropriate quantitative thresholds consistent with statewide per capita goals of six metric tons (MT) of CO_2e by 2030 and two MT of CO_2e by 2050 (CARB 2017). As stated in the 2017 Scoping Plan, these goals may be appropriate for plan-level analyses (city, county, sub-regional, or regional level), but not for specific individual projects because they include all emissions sectors in the state.

AB 1279 was passed on September 16, 2022 and declares the state would achieve net zero greenhouse gas emissions as soon as possible, but no later than 2045. In addition, achieve and maintain net negative greenhouse gas emissions and ensure that by 2045, statewide anthropogenic greenhouse gas emissions are reduced to at least 85% below the 1990 levels. The bill would require updates to the scoping plan (once every five years) to implement various policies and strategies that enable carbon dioxide removal solutions and carbon capture, utilization, and storage technologies.

In response to the passage of AB 1279 and the identification of the 2045 GHG reduction target, CARB published the Final 2022 Climate Change Scoping Plan in November 2022. The 2022 Update builds upon the framework established by the 2008 Climate Change Scoping Plan and previous updates while identifying new, technologically feasible, cost-effective, and equity-focused path to achieve California's climate target. The 2022 Update includes policies to achieve a significant reduction in fossil fuel combustion, further reductions in short-lived climate pollutants, support for sustainable development, increased action no natural and working lands (NWL) to reduce emissions and sequester carbon, and the capture and storage of carbon.

The 2022 Update assesses the progress California is making toward reducing its GHG emissions by at least 40 percent below 1990 levels by 2030, as called for in SB 32 and laid out in the 2017 Scoping Plan, addresses recent legislation and direction from Governor Newsom, extends and expands upon these earlier plans, and implements a target of reducing anthropogenic emissions to 85 percent below 1990 levels by 2045, as well as taking an additional step of adding carbon neutrality as a science-based guide for California's climate work.

Senate Bill 375

The Sustainable Communities and Climate Protection Act of 2008 (SB 375), signed in August 2008, enhances the state's ability to reach AB 32 goals by directing the CARB to develop regional GHG emission reduction targets to be achieved from passenger vehicles by 2020 and 2035. SB 375 aligns regional transportation planning efforts, regional GHG reduction targets, and affordable housing allocations. Metropolitan Planning Organizations (MPO) are required to adopt a Sustainable Communities Strategy (SCS), which allocates land uses in the MPO's Regional Transportation Plan

(RTP). Qualified projects consistent with an approved SCS or Alternative Planning Strategy (categorized as "transit priority projects") can receive incentives to streamline CEQA processing.

On March 22, 2018, CARB adopted updated regional targets for reducing GHG emissions from 2005 levels by 2020 and 2035. The Southern California Association of Governments (SCAG) was assigned targets of an 8 percent reduction in per capita GHG emissions from passenger vehicles by 2020[7] and a 19 percent reduction in per capita GHG emissions from passenger vehicles by 2035. In the SCAG region, SB 375 also provides the option for the coordinated development of subregional plans by the subregional councils of governments and the county transportation commissions to meet SB 375 requirements.

Senate Bill 1383

Adopted in September 2016, SB 1383 (Lara, Chapter 395, Statutes of 2016) requires the CARB to approve and begin implementing a comprehensive strategy to reduce emissions of short-lived climate pollutants. SB 1383 requires the strategy to achieve the following reduction targets by 2030:

- Methane – 40 percent below 2013 levels
- Hydrofluorocarbons – 40 percent below 2013 levels
- Anthropogenic black carbon – 50 percent below 2013 levels

SB 1383 also requires the California Department of Resources Recycling and Recovery (CalRecycle), in consultation with the CARB, to adopt regulations that achieve specified targets for reducing organic waste in landfills.

Senate Bill 100

Adopted on September 10, 2018, SB 100 supports the reduction of GHG emissions from the electricity sector by accelerating the State's Renewables Portfolio Standard (RPS) Program, which was last updated by SB 350 in 2015. SB 100 requires electricity providers to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020, 60 percent by 2030, and 100 percent by 2045.

Executive Order B-55-18

On September 10, 2018, former Governor Brown issued Executive Order (EO) B-55-18, which established a new statewide goal of achieving carbon neutrality by 2045 and maintaining net negative emissions thereafter. This goal is in addition to the existing statewide GHG reduction targets established by SB 375, SB 32, SB 1383, and SB 100.

Title 24, California Building Standards Code and CALGreen Code

The CEC first adopted the Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the State. Although not originally intended to reduce GHG emissions, increased energy efficiency, and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods.

[7] SCAG met 2020 GHG reduction but confirmation from CARB is still pending.

Part 11 of the Title 24 Building Standards is referred to as the California Green Building Standards (CALGreen) Code and was developed to help the State achieve its GHG reduction goals under HSC Division 25.5 (e.g., AB 32) by codifying standards for reducing building-related energy, water, and resource demand, which in turn reduces GHG emissions from energy, water, and resource demand. The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) planning and design; (2) energy efficiency; (3) water efficiency and conservation; (4) material conservation and resource efficiency; and (5) environmental air quality." The CALGreen Code is not intended to substitute for or be identified as meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission. The CALGreen Code establishes mandatory measures for new residential and non-residential buildings. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality.

On August 11, 2021, the CEC adopted the 2022 Title 24 Standards, which went into effect on January 1, 2023. The 2022 standards continue to improve upon the previous (2019) Title 24 standards for new construction of, and additions and alterations to, residential and non-residential buildings (CEC 2022a). The 2022 Title 24 Standards "build on California's technology innovations, encouraging energy efficient approaches to encourage building decarbonization, emphasizing in particular on heat pumps for space heating and water heating. This set of Energy Codes also extends the benefits of photovoltaic and battery storage systems and other demand flexible technology to work in combinations with heat pumps to enable California buildings to be responsive to climate change. This Energy code also strengthens ventilation standards to improve indoor air quality. This update provides crucial steps in the state's progress toward 100 percent clean carbon neutrality by midcentury" (CEC 2022b).

On September 11, 2024, the CEC adopted the 2025 Title 24 standards, which go into effect on January 1, 2026. The 2025 standards introduce new and more efficient technologies which are crucial steps towards a 100 percent clean electricity and carbon neutrality. Benefits of the 2025 update include the following. Reducing GHG emissions by encouraging heat pumps for space and water heating in new buildings and requiring more efficient systems in alteration projects for non-residential buildings. Increasing onsite renewable energy using solar panels and batteries. Encouraging automation of loads to be flexible to enhance grid reliability, reduce emissions and save consumers money. Improve indoor air quality and public health through better ventilation.

Executive Order N-79-20

On September 23, 2020, Governor Newsom issued EO N-79-20, which established the following new statewide goals:

- All new passenger cars and trucks sold in-state to be zero-emission by 2035;
- All medium- and heavy-duty vehicles in the state to be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; and
- All off-road vehicles and equipment to be zero-emission by 2035 where feasible.

Regional and Local Regulations

SCAG 2024-2050 RTP/SCS

On April 4, 2024, SCAG's Regional Council formally adopted the 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS, also known as Connect SoCal). The 2024-2050 RTP/SCS builds upon the progress made through implementation of the 2020-2045 RTP/SCS and includes plan elements organized within the pillars of Mobility, Communities, Environment and Economy. The SCS implementation strategies include advancing the transition to clean transportation technologies, efficient, multimodal, and accessible transit networks, compact and mixed-use development patterns prioritizing walkability, urban greening, and transit-oriented development (SCAG 2024).

Ventura County 2040 General Plan

The Ventura County 2040 General Plan, adopted in 2023, serves as the County's Climate Action Plan (CAP) by including both a GHG Reduction Strategy and Climate Adaptation Strategy that are integrated throughout the Plan. The GHG Strategy identifies policies and programs that establish GHG emissions reduction targets and measures, consistent with state guidance and applicable GHG protocols.

Specific policies and programs have been identified throughout the 2040 General Plan that will reduce GHG emissions and/or are part of the County's integrated GHG Strategy. Those policies and programs that reduce GHG emissions are considered "GHG reduction measures". This is consistent with Policy COS-10.4, which states:

- **COS-10.4 Greenhouse Gas Reductions in Existing and New Development.** The County shall reduce GHG emissions in both existing and new development through a combination of measures included in the GHG Strategy, which includes new and modified regulations, financing and incentive-based programs, community outreach and education programs, partnerships with local or regional agencies, and other related actions.

Numerous implementation programs and policies apply to the current project, including measures specific to land use, circulation, conservation, open space, water use, and safety. The following policies/programs apply to the project:

- **COS-8.9 Urban Tree Canopy Improvements for Energy Conservation**. The County shall encourage discretionary development to include the planting of shade trees on each property and within parking areas to reduce radiation heat production.
- **COS-9.1 Open Space Preservation.** The County shall preserve natural open space resources through:
  - the concentration of development in Urban Areas and Existing Communities;
  - use of cluster or compact development techniques in discretionary development adjacent to natural open space resources;
  - maintaining large lot sizes in agricultural areas, rural and open space areas;
  - discouraging conversion of lands currently used for agricultural production or grazing;
  - limiting development in areas constrained by natural hazards; and

- encouraging agricultural and ranching interests to maintain natural habitat in open space areas where the terrain or soil is not conducive to agricultural production or grazing.

- **COS-9.3 Open Space Preservation.** The County shall place a high priority on preserving open space lands for recreation, habitat protection, wildlife movement, flood hazard management, public safety, water resource protection, and overall community benefit.
- **COS-C Update Tree Protection Ordinance.** The County shall update existing Tree Protection Regulations in the Non-Coastal Zoning Ordinance to further enhance conservation of our urban forests and the preservation of the County's oak woodland resources. Updates shall include incorporation of Board-adopted recommendations from the Ventura County Oak Woodlands Management Plan (2007), which includes tree replacement offsets for ministerial development projects that remove protected trees. The County shall also re-evaluate and modify, if necessary, mitigation ratios for tree removal and oak woodland impacts for discretionary development projects, evaluate existing protections for invasive, non-native trees and consider the degree to which they provide habitat for a species during critical life stages (e.g., colonial roost sites, breeding sites, etc.). In addition, the evaluation shall also include anticipated effects of climate change on the urban forest environment.
- **COS-U Solar Canopies in Non-Residential Projects.** The County shall amend the County's Coastal and Non-Coastal Zoning Ordinances to require parking lots for new non-residential construction projects, with floor area of greater than 50,000 square feet, to include solar canopies.
- **CTM-3.5 Bicycle Routes in Rural Areas.** The County shall plan for bicycle network connectivity in rural, agricultural, and open space areas in a way that supports and complements business and agricultural activities in those areas.
- **CTM-6.5 Electric Vehicle Charging Stations.** The County shall support the installation of electric vehicle charging stations, where feasible, at County facilities, parking lots, park-and-ride lots, truck stops, and new development.
- **CTM-6.3 Permeable Pavement.** As part of new roadway planning and design as part of discretionary development, the County shall promote the use of permeable paving and other passive drainage features such as bio-swales to prevent flooding, particularly in urban areas.
- **HAZ-1.1 Fire Prevention Design and Practices**. The County shall continue to require development to incorporate design measures that enhance fire protection in areas of high fire risk. This shall include but is not limited to incorporation of fire-resistant structural design, use of fire-resistant landscaping, and fuel modification around the perimeter of structures
- **HAZ 1.2 Defensible Space Clear Zones.** The County shall require adherence to defensible space standards, or vegetation "clear zones," for all existing and new structures in areas that are designated as Hazardous Fire Areas by the Ventura County Fire Protection District and High Fire Hazard Severity Zones by the California Department of Forestry and Fire Protection.
- **HAZ-1.4 Development in High Fire Hazard Severity Zones and Hazardous Fire Areas.** The County shall require the recordation of a Notice of Fire Hazard with the County Recorder for all new discretionary entitlements (including subdivisions and land use permits) within areas designated as Hazardous Fire Areas by the Ventura County Fire Department or High Fire Hazard Severity Zones by the California Department of Forestry and Fire Protection (CAL FIRE)
- **HAZ-H Sea Level Rise Analysis in Siting and Design of New Development.** The County shall consider the feasibility of amending the Non-Coastal Zoning Ordinance and Coastal Zoning

Ordinance to require technical analysis of projected sea level rise exposure for the siting and design of new discretionary development.

- **HAZ-T Cool Roof Ordinance**. The County shall adopt a Cool Roof Ordinance that exceeds the prescriptive cool roof requirements of the 2019 California Building Energy Efficiency Standard for Residential and Nonresidential Buildings by 25 percent (California Energy Code). Under a Cool Roof Ordinance, the County would require new construction to replace or re-coat 2,500 square feet for nonresidential and 1,250 square feet of roof space for residential buildings, or 72.5 percent or more of roofs.
- **HAZ-V Cool Pavements Standards.** The County shall incorporate cool pavement standards into the County's development standards for County and private development projects, in both new construction and changes to existing onsite paved surface areas (e.g., parking lots, private roadways, other hardscapes).
- **HAZ-10.5 Air Pollution Impact Mitigation Measures for Discretionary Development**. The County shall work with applicants for discretionary development projects to incorporate bike facilities, solar water heating, solar space heating, incorporation of electric appliances and equipment, the use of zero and/or near zero emission vehicles and other measures to reduce air pollution impacts and reduce greenhouse gas (GHG) emissions.
- **LU-9.1 Areas Appropriate for the Open Space Land Use Designation.** The County shall ensure that the Open Space land use designation includes areas of land or water that are set aside for the preservation of natural resources, including, but not limited to, areas required for the preservation of plant and animal life, including habitat for fish and wildlife species; areas required for ecologic and other scientific study purposes; rivers, streams, bays, wetlands, and estuaries; and coastal beaches, lakeshores, banks of rivers and streams, and important watershed lands.
- **LU-9.2 Preservation of Areas for Public Health and Safety.** The County shall designate areas of land or water which are set aside for public health and safety as Open Space, thereby safeguarding humans and property from certain natural hazards, including, but not limited to, areas which require special management or regulation because of hazardous or special conditions such as earthquake fault zones, unstable soil areas, flood plains, watersheds, areas presenting high fire risks, areas required for the protection of water quality and water reservoirs, and areas required for the protection and enhancement of air quality.
- **LU-9.3 Minimal Parcel Size for the Open Space Land Use Designation.** The County shall ensure that the smallest minimum parcel size consistent with the Open Space land use category is 10 acres. The County may require larger minimum parcel sizes based on the zone classification.
- **LU-9.5 Recreational Areas Appropriate for the Open Space Land Use Designation.** The County shall designate areas appropriate for recreational activities as Open Space, including, but not limited to, use and enjoyment of recreational trails and areas for hunting and fishing. Preservation of open space also serves to protect areas of outstanding scenic, historic, and cultural value; areas particularly suited for park and recreation purposes, including access to lakeshores, beaches, and rivers and streams; and areas which serve as links between major recreation and open space reservations, including utility easements, banks of rivers and streams, trails, and scenic highway corridors.
- **LU-9.8 Maximum Lot Coverage Nonconforming Lots – Open Space Land Use Designation.** The County shall ensure that the maximum lot coverage of lots of less than 10 acres (nonconforming) in area shall be as specified for the Open Space designation, or 2,500 square feet plus 1 square

foot for each 22.334 square feet of lot area over 5,000 square feet, whichever is greater. Greater building coverage may be allowed under discretionary permits for Farmworker Housing Complexes and existing uses/structures listed in the Non-Coastal Zoning Ordinance under the heading of "Crop and Orchard Production."

- **LU-9.9 Open Space Land Use Designation Interpretations**. The County shall ensure that Open Space Interpretations granted prior to May 17, 1983 permitting parcel sizes less than those specified in the General Plan shall be considered conforming to the General Plan. Zoning which is consistent with the purpose and intent of the Open Space Interpretations shall be considered conforming to the General Plan.
- **LU-11.3 Design.** The County shall require new commercial and industrial developments to be designed to be generally compact, grouped and consolidated into functional units providing for sufficient off-street parking and loading facilities, maximize pedestrian and vehicle safety, reduce vehicle miles traveled (VMT), encourage electric vehicle charging, and minimize land use conflicts and traffic congestion. The County shall require that commercial and industrial discretionary development is designed to provide adequate buffering (e.g., walls, landscaping, setbacks) and operational conditions (e.g., hours of operation, and scheduling of deliveries) to minimize adverse impacts (e.g., noise, glare, and odors) on adjoining and adjacent residential areas.
- **PFS-12.4 Consistent Fire Protection Standards for New Development.** The County, in coordination with local water agencies and the Fire Protection District, shall require new discretionary development to comply with applicable standards for fire flows and fire protection.
- **WR-3.1 Non-Potable Water Use.** The County shall encourage the use of non-potable water, such as tertiary treated wastewater and household graywater, for industrial, agricultural, environmental, and landscaping needs consistent with appropriate regulations.
- **WR-3.2 Water Use Efficiency for Discretionary Development.** The County shall require the use of water conservation techniques for discretionary development, as appropriate. Such techniques include low flow plumbing fixtures in new construction that meet or exceed the California Plumbing Code, use of graywater or reclaimed water for landscaping, retention of stormwater runoff for direct use and/or groundwater recharge, and landscape water efficiency standards that meet or exceed the standards in the California Model Water Efficiency Landscape Ordinance.
- **WR-3.3 Low-Impact Development.** The County shall require discretionary development to incorporate low impact development design features and best management practices, including integration of stormwater capture facilities, consistent with County's Stormwater Permit.

3 Impact Analysis

3.1 Methodology

Criteria pollutant and GHG emissions for project construction and operation were calculated using the California Emissions Estimator Model (CalEEMod), Version 2022.1.0. CalEEMod allows for the use of default data (e.g., emission factors, trip lengths, meteorology, source inventory) provided by the various California air districts to account for local requirements and conditions, and/or user-defined inputs. The input data and subsequent construction and operation emission estimates for the project are summarized below and included in Appendices A and B.

Construction Emissions

Construction emissions of criteria air pollutants and GHGs include emissions generated by construction equipment used onsite and emissions generated by vehicle trips associated with construction, such as worker and truck delivery trips.

Construction of the project was analyzed based on the applicant-provided construction schedule. Construction is anticipated to begin in March 2026 with construction ending in November 2031. Construction is anticipated to occur Monday through Friday, with equipment operating up to 8 hours per day. CalEEMod defaults for equipment, horsepower and load factors were used.

Project construction would require the import of 17,000 CY of soil, used as fill on the site. The project site would be leveled in three grading sub-phases (one in each construction phase). Demolition of a 5,700 sf building would occur as part of project construction during the first phase.

This analysis assumes that the project would comply with all applicable regulatory standards. In particular, the project would comply with VCAPCD Rule 55 to control fugitive dust emissions from construction activities. This rule is modeled within CalEEMod by assuming that watering would occur twice a day. The project would also comply with VCAPCD Rule 74.2 which sets limits on the ROC content of architectural coatings. This rule is modeled within CalEEMod by assuming that non-flat coatings are limited to 50 grams per liter of ROC content, flat coatings are limited to 50 grams per liter of ROC content and traffic marking coatings are limited to 100 grams per liter of ROC content.

In accordance with common industry practice and the Association of Environmental Professional (AEP) recommendation, GHG emissions from construction of the project were amortized over a 30-year period and added to annual operational emissions to determine the project's total annual GHG emissions (AEP 2016).

Operational Emissions

In CalEEMod, operational sources of criteria pollutant emissions include area, energy, and mobile sources; GHG emissions include water, solid waste and refrigerant sources in addition to area, energy, and mobile sources. The first full year of operation was assumed to be 2028 for Phase 1, 2030 for Phase 2, and 2032 for Phase 3, based on the provided construction schedule. The project was modeled using CalEEMod land use inputs that are most representative of the land uses that are part of the project (e.g., mid-rise apartments, parking lot, health club, etc.). Other than mobile and energy sources, CalEEMod defaults were used to determine operational emissions for the project. More details are provided in the below subsections.

Mobile Sources

Mobile source emissions consist of emissions from vehicle trips generated by the project. The trip generation rates from the Trip Generation Memo (TJW Engineering, Inc. 2025) were used to estimate mobile source emissions for affordable housing units. VMT and fleet mix were based on CalEEMod default of 23.25 miles per trip.

Energy Sources

Emissions from energy use include electricity and natural gas use. The project is being developed as 100 percent electric and therefore no natural gas connection is anticipated, and no natural gas emissions would occur. In order to accurately account for energy use, the default British thermal units of natural gas were converted into kilowatt hours of electricity and added to the default kilowatt hours of electricity for each land use.

Electricity emissions only apply to GHG emissions (as the energy is generated offsite and therefore is not relevant for local and regional air quality conditions) and are calculated by multiplying the energy use times the carbon intensity of the utility district per kilowatt hour (CAPCOA 2021). The project's electricity would be provided by Southern California Edison (SCE).

3.2 Significance Thresholds

Based on Appendix G of the *CEQA Guidelines*, the project would have a significant air quality impact if it would:

a) Conflict with or obstruct implementation of the applicable air quality plan.
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project sites region is non-attainment under an applicable federal or state ambient air quality standard.
c) Expose sensitive receptors to substantial pollutant concentrations.
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Regarding GHG emissions, based on Appendix G of the *CEQA Guidelines*, the project would have a significant GHG impact if it would:

a) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; and/or;
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

3.2.1 Air Quality

The VCAPCD has adopted guidelines for quantifying and determining the significance of air quality emissions in its *Air Quality Assessment Guidelines* (VCAPCD 2003) for construction and operation. The VCAPCD considers construction-related air quality impacts to be significant if project construction (individually and cumulatively) would jeopardize attainment of the federal one-hour standard by generating more than 25 pounds per day of ROC or NO_X. In addition, the VCAPCD considers operational air quality impacts to be significant if a project would generate more than 25 pounds per

day of the ozone precursors ROC or NO_X.[8] Furthermore, emissions from construction and operational activity that exceed two pounds per day of ROC or NO_X for a project that is found inconsistent with the AQMP would result in a cumulatively considerable contribution to a significant cumulative air quality impact related to ozone. Inconsistent projects are typically those that cause the existing population to exceed the population forecasts contained in the most recently adopted AQMP (VCAPCD 2003).

The VCAPCD has not established quantitative thresholds for particulate matter for either construction or operation. However, the VCAPCD states that a project would have a significant impact if it would be reasonably expected to generate fugitive dust emissions in such quantities as to cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which may endanger the comfort, repose, health, or safety of any such person or the public. In addition, the VCAPCD recommends the fugitive dust minimization measures described in Section 7.4.1 of the *Air Quality Assessment Guidelines* be implemented as part of all project-related dust-generating operations and activities (VCAPCD 2003). Similarly, the VCAPCD has not established quantitative thresholds for CO for either construction or operation. However, the Basin attained the CO ambient air quality standards in 2004 and CO hotspots are not expected to occur within the Basin due to cleaner vehicle fleet mixes.

The VCAPCD has not established a significance threshold for impacts related to Valley Fever. However, the VCAPCD recommends consideration of the following factors that may indicate a project's potential to result in impacts related to Valley Fever:

- Disturbance of the topsoil of undeveloped land (to a depth of about 12 inches)
- Dry, alkaline, sandy soils
- Virgin, undisturbed, non-urban areas
- Windy areas
- Archaeological resources probable or known to exist in the area (e.g., Native American midden sites)
- Special events (fairs, concerts) and motorized activities (motocross track, All Terrain Vehicle activities) on unvegetated soil (non-grass)
- Non-native population (i.e., out-of-area construction workers)

3.2.2 Greenhouse Gas Emissions

The vast majority of individual projects do not generate sufficient GHG emissions to directly influence climate change. However, physical changes caused by a project can contribute incrementally to significant cumulative effects, even if individual changes resulting from a project are limited. As a result, the issue of climate change typically involves an analysis of whether a project's contribution towards an impact would be cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (CEQA Guidelines Section 15064[h][1]).

According to the Ventura County *Initial Study Assessment Guidelines* (2011), the VCAPCD has not yet adopted a threshold of significance for GHG emissions from land use development projects, nor has

[8] The VCAPCD states that construction emissions of ROC and NO_X should not be counted towards the operational emissions thresholds because such emissions are temporary (VCAPCD 2003).

the VCAPCD developed its own method of determining significance in the area of project GHG emissions. The *Initial Study Assessment Guidelines* state,

When adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence." CEQA Guidelines § 15064.7(c).

The Ventura County 2040 General Plan serves as the County's CAP by including both a GHG Reduction Strategy and Climate Adaptation Strategy that are integrated throughout the 2040 General Plan. However, the County has not adopted a numerical significance threshold or post-2030 GHG reduction measures aligned with the statewide 2045 carbon neutrality goal. Additionally, the Governor's Office of Land Use and Climate Innovation (formerly known as the Governor's Office of Planning and Research), CARB, California Air Pollution Control Officers Association, nor any other State or applicable regional agency has adopted a numerical significance threshold for assessing GHG emissions that is applicable to the proposed project.

In the absence of any adopted or accepted numeric threshold, the significance of the proposed project's GHG emissions are evaluated in accordance with *CEQA Guidelines* Sections 15064.4(b) and 15064(h)(3) by considering whether the proposed project complies with applicable plans, policies, regulations, and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. For this project, as a land use development project, the most applicable adopted regulatory plans to reduce GHG emissions and mitigate the effects of climate change are the 2022 Scoping Plan, SCAG 2024 RTP/SCS, and Ventura County 2040 General Plan. The GHG emissions from the construction and operation of the proposed project are provided for informational purposes.

Air Quality Project Impacts

Threshold:	Would the project conflict with or obstruct implementation of the applicable air quality plan?

Impact AQ-1 THE PROJECT WOULD NOT CONFLICT WITH OR OBSTRUCT IMPLEMENTATION OF THE 2022 VENTURA COUNTY AQMP, AS THE PROJECT WOULD NOT RESULT IN POPULATION GROWTH THAT EXCEEDS THE COUNTY'S PROJECTIONS. THEREFORE, IMPACTS WOULD LESS THAN SIGNIFICANT.

According to the VCAPCD's Guidelines, a project may be inconsistent with the applicable air quality plan if it would cause the existing population to exceed forecasts contained in the most recently adopted AQMP. The VCAPCD adopted the 2022 Ventura County AQMP to demonstrate a strategy for, as well as reasonable progress toward, attainment of the federal 8-hour ozone standard. The 2022 Ventura County AQMP relies on the SCAG 2020 RTP/SCS forecasts of regional population growth in its AQMP population projections.

According to SCAG, unincorporated Ventura County's population in 2019 was 93,700 with projected growth of 7,600 persons to 101,300 by 2045. Employment in 2019 was 31,500 with projected growth of 5,400 employees by 2045 to 36,900 (SCAG 2020 and 2024). According to the California Department of Finance (DOF), unincorporated Ventura County has an estimated 2.75 persons per household (DOF 2025). The proposed project would result in approximately 902 additional residents based on the DOF estimate of persons per household for Ventura County (DOF 2025). This would fall within the 7,600 additional residents in unincorporated Ventura County anticipated between 2019 and 2045.

Additionally, the proposed project would result in up to 20 full-time employees (assumed from the size of community centers and maintenance buildings). This would fall well within the 5,400-employee growth projected in unincorporated Ventura County between 2019 and 2045. Therefore, the project would not result in the County exceeding forecasts used in the 2022 AQMP and impacts would be less than significant.

Threshold:	Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?

Impact AQ-2 CONSTRUCTION OF THE PROPOSED PROJECT WOULD POTENTIALLY RESULT IN AIR POLLUTANT EMISSIONS THAT EXCEED THE VCAPCD THRESHOLDS. HOWEVER, IMPLEMENTATION OF MITIGATION MEASURES AQ-1 AND AQ-2 WOULD REDUCE CONSTRUCTION POLLUTANT EMISSIONS TO BELOW THE APPLICABLE THRESHOLDS. PROJECT OPERATIONAL ACTIVITIES WOULD NOT GENERATE AIR POLLUTANT EMISSIONS THAT EXCEED VCAPCD THRESHOLDS, AND IMPACTS RELATED TO OPERATION WOULD BE LESS THAN SIGNIFICANT.

Construction Impacts

Construction activities associated with development of the project would temporarily generate emissions associated with equipment and fugitive dust. Construction emissions modeled include emissions generated by construction equipment used on the site and emissions generated by vehicle trips associated with construction, such as worker, hauling, and vendor trips. It is assumed all construction equipment used would be diesel-powered.

Estimated maximum daily ROC, NO_X, CO, SO_2, PM_{10}, and $PM_{2.5}$ construction emissions are shown in Table 5. As stated above in Section 3.2.1, ROC and NO_x emissions during project construction should be mitigated if estimated emissions from heavy-duty construction equipment exceed the VCAPCD's 25 pounds per day threshold. As shown in Table 5, ROC and NO_x emissions would potentially exceed the 25 pounds per day threshold during construction. Exceedances in ROC emissions are associated with off gassing from application of architectural coating and asphalt paving. Exceedances in NO_X emissions are associated with the exhaust from the off-road construction equipment.

Table 5 Project Construction Emissions

	Maximum Emissions (lbs/day)					
Construction Phase	**ROC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**

Threshold Exceeded?	**Yes**	**Yes**	**N/A**	**N/A**	**N/A**	**N/A**

lbs/day = pounds per day; ROC = reactive organic compounds; NO_x = nitrogen oxide; CO = carbon monoxide; PM_{10} = particulate matter with a diameter no more than 10 microns; $PM_{2.5}$ = particulate matter with a diameter no more than 2.5 microns; SO_x = sulfur oxide

Notes: All emissions modeling was completed using CalEEMod. Some numbers may not add up due to rounding. Emission data is pulled from "mitigated" results, which account for compliance with regulatory compliance measures. Emissions presented are the highest of the winter and summer modeled emissions. Maximum daily construction emissions are the highest total emissions from a construction phase or overlapping construction phases. Emissions from overlapping construction phases are added together.

Source: See Appendix B for CalEEMod modeling results.

VCAPCD recommends implementation of the fugitive dust control measures described in Section 7.4.1 of the *Air Quality Assessment Guidelines* as part of all project-related dust-generating operations and activities (VCAPCD 2003). Consistent with this recommendation, the project would be required to comply with the standard construction measures listed in Section 2.2.1 above and found in the VCAPCD's *Ventura County Air Quality Assessment Guidelines*. Compliance with VCAPCD Rule 55 (Fugitive Dust) and Rule 74.2 (Architectural Coatings) would also be required. Nonetheless, even with compliance with VCAPCD Rules 55 and 74.2, construction emissions have the potential to exceed the applicable thresholds, and impacts would be potentially significant without mitigation.

Operational Impacts

Operational emissions for the proposed project are comprised of area source emissions and mobile source emissions. Area source emissions are generated by landscape maintenance equipment; consumer products such as solvents and propellants contained in aerosol and non-aerosol products; pesticide application; and architectural coating. Mobile source emissions are generated by the increase in motor vehicle trips to and from the project site associated with operation of onsite development.

Error! Reference source not found. summarizes the project's operational emissions by emission source. Project operation would not exceed the VCAPCD 25 pounds per day emission thresholds for ROC and NO_x. Therefore, operation of the project would not contribute substantially to an existing or projected air quality violation. In addition, because criteria pollutant emissions and regional thresholds are cumulative in nature, project operation would not result in a cumulatively considerable net increase of criteria pollutants. Operational impacts would be less than significant.

Table 6 Project Operational Emissions

Emission Source	Maximum Daily Emissions (lbs./day)					
	ROC	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Phase 1						
Mobile	2	2	13	<1	3	1

lbs/day = pounds per day; ROC = reactive organic compounds; NOx = nitrogen oxide; CO = carbon monoxide; PM10 = particulate matter with a diameter no more than 10 microns; PM2.5 = particulate matter with a diameter no more than 2.5 microns; SO_2 = sulfur dioxide.

Notes: Area, energy, and mobile emissions modeling was completed using CalEEMod; see Appendix B for modeling results. Some numbers may not add up due to rounding. Emission data is pulled from "mitigated" results that include compliance with regulatory compliance measures. Emissions presented are the highest of the winter and summer modeled emissions.

Mitigation Measures

AQ-1 Construction Equipment Emissions Reduction

Prior to issuance of demolition and grading permits, the following measures shall be noted on all construction plans:

- All mobile off-road equipment (wheeled or tracked) used during construction activities shall meet the USEPA Tier 4 final standards. Tier 4 certification can be for the original equipment or equipment that is retrofitted to meet the Tier 4 final standards.
- Alternative Fuel (natural gas, propane, electric, etc.) construction equipment shall be incorporated where available.
- Electricity shall be supplied to the site from the existing power grid to support the electric construction equipment. If connection to the grid is determined to be infeasible for portions of the project, a non-diesel fueled generator shall be used.
- The project shall comply with the CARB Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than five minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation.

These requirements shall also be incorporated into the contract agreement with the construction contractor. A copy of the equipment's certification or model year specifications shall be available upon request for all equipment onsite.

AQ-2 Architectural Coating Emissions Reduction

In order to reduce emissions from architectural coating, the following mitigation measures shall be implemented and, prior to issuance of demolition and grading permits, noted on all construction plans:

- All interior and exterior surfaces constructed in Phase 2 shall use coatings with no more than 10 grams per liter of ROCs, or the architectural coating phase shall last a minimum of 32 days.
- Phase 3 architectural coating shall last a minimum of 40 days using coatings with no more than 10 grams per liter of ROCs, or alternatively, the architectural coating phase shall last a minimum amount of 42 days.

To verify compliance, the construction contractor shall submit architectural coating schedules for Phase 2 and Phase 3 of construction to the Planning Department prior to the commencement of architectural coating activities.

Significance After Mitigation

With incorporation of Mitigation Measure AQ-1, the project would be required to use off-road diesel-powered construction equipment that meets or exceeds the most stringent and environmentally protective CARB and USEPA Tier 4 off-road emissions standards, or alternatively fueled equipment which would substantially reduce NOx emissions. Incorporation of Mitigation Measure AQ-2 would reduce ROC emissions associated with architectural coating activities. As shown in Table 7 Mitigated Project Construction EmissionsTable 7, with incorporation of Mitigation Measures AQ-1 and AQ-2, construction-related criteria pollutant emissions would be reduced to a less than significant level. Table 7 reports architectural coating emissions based on a 30-day application period during Phase 2, assuming architectural coating with no more than 10 grams per

liter of ROCs. For Phase 3, the table reports a 40-day architectural coating application period, with no more than 10 grams per liter of ROCs, as identified in Mitigation Measure AQ-2. Of the options present in Mitigation Measure AQ-2, these would reduce ROC emissions by less than the option that would involve a lengthened architectural coating period, but no changes to the ROC content of the coatings. If the architectural coating phase is increased by more days than identified in the measure, ROC emissions in Table 7 would be further reduced.

Table 7 Mitigated Project Construction Emissions

	Maximum Emissions (lbs/day)					
Construction Phase	**ROC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**

Threshold Exceeded?	**No**	**No**	**N/A**	**N/A**	**N/A**	**N/A**

lbs/day = pounds per day; ROC = reactive organic compounds; NO_x = nitrogen oxide; CO = carbon monoxide; PM_{10} = particulate matter with a diameter no more than 10 microns; $PM_{2.5}$ = particulate matter with a diameter no more than 2.5 microns; SO_x = sulfur oxide

[1]Emissions would be 24.6 pounds per day.

Notes: Some numbers may not add up due to rounding. Emission data is pulled from "mitigated" results, which account for compliance with regulatory compliance measures. Emissions presented are the highest of the winter and summer modeled emissions. Maximum daily construction emissions are the highest total emissions from a construction phase or overlapping construction phases. Emissions from overlapping construction phases are added together.

Source: See Appendix B for CalEEMod modeling results.

Threshold:	Would the project expose sensitive receptors to substantial pollutant concentrations?

Impact AQ-3 **THE PROJECT WOULD NOT EXPOSE SENSITIVE RECEPTORS TO SUBSTANTIAL POLLUTANT CONCENTRATIONS RELATED TO FUGITIVE DUST, CARBON MONOXIDE HOTSPOTS, OR SAN JOAQUIN VALLEY FEVER. HOWEVER, CANCER RISKS FROM CONSTRUCTION ACTIVITIES TO OFFSITE SENSITIVE RECEPTORS WOULD BE POTENTIALLY SIGNIFICANT. IMPLEMENTATION OF MITIGATION MEASURE AQ-1 WOULD REDUCE IMPACTS RELATED TO CANCER RISK TO BELOW REGULATORY THRESHOLDS. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED.**

Sensitive receptors are members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. The sensitive receptors closest to the project site include single-family residences adjacent to the northern and southern project boundary. The VCAPCD states that localized air quality impacts to sensitive receptors typically result from fugitive dust, CO, toxic air contaminants, and entrained fungal spores that cause Valley Fever (VCAPCD 2003). The project's impacts related to each of these pollutants is detailed below.

Fugitive Dust

As discussed under Impact AQ-2, the VCAPCD recommends that the fugitive dust control measures described in Section 7.4.1 of the *Air Quality Assessment Guidelines* be implemented as part of all project-related dust-generating operations and activities (VCAPCD 2003). These measures address both PM_{10} and $PM_{2.5}$ emissions from construction activities. The project would be required to implement these fugitive dust control measures; therefore, project construction would not expose sensitive receptors to substantial pollutant concentrations. Project operation would not involve activities that would generate substantial fugitive dust and would, therefore, not expose sensitive receptors to substantial pollutant concentrations. Impacts would be less than significant.

Carbon Monoxide

The VCAPCD has not established quantitative thresholds for CO for either construction or operation.

As discussed above, the Basin has been in attainment for CO ambient air quality standards since 2004 and the CO levels in Ventura County have been historically low enough that VCAPCD monitoring stations throughout the County ceased monitoring ambient CO concentrations in 2004. Furthermore, as identified in the TIA for the project (TJW Engineering, Inc. 2024), no studied intersection would operate at a LOS below C with the implementation of the project. Because ambient CO concentrations in the County are relatively low, and because the project would not result in a substantial addition of traffic or congestion to any area intersection (especially not any high-volume or already-congested intersections), the project would not be expected to result in a CO hotspot. Therefore, impacts would be less than significant.

Toxic Air Contaminants

Construction

Construction-related activities would result in temporary project-generated emissions of diesel particulate matter (DPM) exhaust emissions from off-road, heavy-duty diesel equipment for demolition, site preparation, trenching, infrastructure installation, building construction, paving, and other construction activities. DPM was identified as a toxic air contaminant (TAC) by CARB in 1998 (CARB 2022a).

Generation of DPM from construction projects typically occurs in a single area for a short period of time. Construction of the project would occur over approximately five years. The dose to which the receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance or substances in the environment and the extent of exposure that person has with the substance. Dose is positively correlated with time, meaning that a longer exposure period would result in a higher exposure level for the maximally exposed individual. The risks estimated for a Maximally Exposed Individual are higher if a fixed exposure occurs over a longer period of time. However, young children are more sensitive to exposure to some carcinogens than adults. Therefore, OEHHA has implemented age sensitivity factors that consider the increased sensitivity of children during early development stages (i.e., 3rd trimester exposure to 16 years). Given the age sensitivity factors, exposure at a young age to even short-term projects have the potential to result in substantial risk exposure.

The proposed project would comply with the applicable VCAPCD and CARB requirements and control strategies intended to reduce emissions from construction equipment and activities. The project would comply with the CARB Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than five minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation; compliance with these requirements would minimize emissions of TACs during construction. However, given the construction area's proximity to nearby sensitive receptors, impacts from construction related TACs were analyzed for both offsite sensitive receptors as well as the onsite sensitive receptors that would occupy Phase 1 of the site while Phase 2 and Phase 3 are being constructed.

The carcinogenic and chronic health risks at the offsite maximum exposed individual receptor (OMEIR) represent the maximum risk residents offsite could be exposed to during the construction of the project. The risk assumes that there are no filtration devices (such as MERV 13 or higher) filters at any offsite receptors. It is assumed in the HRA that the OMEIR would be exposed to construction exhaust

emissions while they are a third trimester fetus through a five-year-old child. Note that the chronic risk hazard quotient is a unitless value that represents non-carcinogenic risk, and this value is based on the maximum annual concentration. The project OMEIR was determined to be at a single-family residential property directly south of the project site and has an estimated cancer risk of 32.77 in one million, which exceeds the VCAPCD threshold of 10 in one million. The maximum chronic non-cancer risk is 0.42, which is less than the VCAPCD hazard index of 1.

Because Phase 1 would be operational while Phase 2 and Phase 3 are being constructed, risk to onsite residences from construction of Phase 2 and Phase 3 were also analyzed. Sensitive receptors introduced during the operation of Phase 1 are anticipated to experience greater health risks compared to those present during the operation of Phase 2, which would only be exposed to construction emissions during Phase 3 construction. Therefore, Phase 2 receptors are excluded from a detailed health risk analysis, as evaluating Phase 1 onsite residences would provide a conservative estimate for onsite receptor health risk across the entire project site. The project maximum exposed individual receptor (PMEIR) is at the western portion of the Phase 1 area, directly adjacent to the Phase 2 boundary. Cancer risk for residents of Phase 1 is estimated at 38.48 per million, which exceeds the VCAPCD threshold of 10 in one million. Chronic non-cancer risk for onsite residents is 0.19, which is well below the VCAPCD threshold of 1. Therefore, offsite and onsite impacts would exceed regulatory thresholds and would result in potentially significant cancer impacts without mitigation.

Operation

According to VCAPCD's *Air Quality Assessment Guidelines* (2003) and CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (2005), typical sources of acutely and chronically hazardous TACs include industrial manufacturing processes (e.g., chrome plating, electrical manufacturing, and petroleum refining). Operation of the project would not include these types of potential industrial manufacturing process sources. Additionally, the project would not include any substantial mobile or stationary sources of air pollution once operational. Therefore, impacts related to TAC emissions from project operation would be less than significant.

Proximity to Freeway

Although not a CEQA issue, according to the Ventura County 2040 General Plan, discretionary developments that include sensitive receptors should be located at least 1,000 feet from roads with traffic volumes exceeding 50,000 vehicles per day. If a project proposes sensitive land uses within this 1,000-foot buffer, a site specific HRA is required. The project is located approximately less than 150 feet east of SR-33, therefore a mobile health risk analysis for the project site was conducted (Meridian 2025). As identified in the Mobile Health Risk Analysis, risk to onsite residents without the incorporation of MERV 13 filters would result in a cancer risk of 3.64 per million which is below the 10 in one million threshold. Maximum non-cancer chronic risk would be 0.0042 which is less than the VCAPCD's chronic hazard index of 1. Therefore, the project's proximity to SR-33 would result in less than significant health impacts for onsite residents.

San Joaquin Valley Fever

Construction activities, including site preparation and grading, would have the potential to release *Coccidioides immitis* spores. Substantial increases in the number of reported cases of Valley Fever tend to occur only after major ground-disturbing events such as the 1994 Northridge earthquake (VCAPCD 2003). Additionally, the population of Ventura has been and would continue to be exposed to Valley Fever from agricultural and construction activities occurring throughout the region, not

just from construction of the proposed project. Construction of the project would not result in a major ground disturbance, and because of compliance with VCAPCD Rule 55 (Fugitive Dust), the project would not release a large number of spores should any be present on the site. As discussed under *Air Pollutant Emission Thresholds*, the VCAPCD does not have a recommended threshold for Valley Fever impacts, but instead recommends consideration of the following factors that may indicate a project's potential to result in significant impacts related to Valley Fever:

- Disturbance of the topsoil of undeveloped land (to a depth of about 12 inches)
- Dry, alkaline, sandy soils
- Virgin, undisturbed, non-urban areas
- Windy areas
- Archaeological resources probable or known to exist in the area (Native American midden sites)
- Special events (fairs, concerts) and motorized activities (motocross track, All Terrain Vehicle activities) on unvegetated soil (non-grass)
- Non-native population (i.e., out-of-area construction workers)

The project would involve grading of previously disturbed agricultural soils, which limits the deposit of fungal spores. It is anticipated that construction workers would be from the local or regional area and would therefore have previous exposure to and immunity from Valley Fever. Additionally, compliance with VCAPCD Rule 55 (Fugitive Dust) would require daily site watering, which would keep soil moist and limit dust generation. Therefore, construction of the project would not result in a substantial increase in entrained fungal spores that cause Valley Fever above existing background levels and impacts related to Valley Fever would be less than significant.

Mitigation Measure

Mitigation Measure AQ-1, listed under Impact AQ-1, would be implemented during project construction.

Significance After Mitigation

With incorporation of Mitigation Measure AQ-1, the project would be required to use off-road diesel-powered construction equipment that meets or exceeds the most stringent and environmentally protective CARB and USEPA Tier 4 off-road emissions standards, or alternatively fueled equipment which would substantially reduce DPM emissions. The Tier 4 standards reduce DPM emissions by approximately 81 to 96 percent as compared to equipment that meet the Tier 2 off-road emissions standards, depending on the specific horsepower rating of each piece of equipment. Thus, with implementation of Mitigation Measure AQ-1, risk from onsite construction activities to both on and offsite receptors would be reduced. With implementation of Mitigation Measure AQ-1, Cancer risk to the OMEIR would be reduced to 4.17 in one million or less, depending on the amount of non-diesel equipment used. This is well below the VCAPCD threshold of 10 in one million. Further, incorporation of the cleaner construction equipment would reduce risk to onsite residents of Phase 1 (the PMEIR) to 6.40 in one million. With the implementation of Mitigation Measure AQ-1, construction-related health risks would be substantially reduced and would be well below regulatory thresholds. Therefore, construction-related health impacts would be reduced to a less than significant level with mitigation.

Threshold:	Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Impact AQ-4 THE PROJECT WOULD NOT RESULT IN OBJECTIONABLE ODORS AFFECTING A SUBSTANTIAL NUMBER OF PEOPLE DURING CONSTRUCTION OR OPERATION. IMPACTS WOULD BE LESS THAN SIGNIFICANT.

Construction activities could generate odors associated with the use of diesel fuel. For construction activities, odors would be short-term in nature and subject to VCAPCD Rule 51 (Nuisance). Construction activities would be temporary and transitory and associated odors would cease upon construction completion. Accordingly, the project would not create objectionable odors affecting a substantial number of people during construction, and short-term impacts would be less than significant.

Based on the VCAPCD *Ventura County Air Quality Assessment Guidelines* (2003), a project may have a significant impact if it would generate an objectionable odor to a degree that would cause injury, detriment, nuisance, or annoyance to a considerable number of persons or to the public, or which would endanger the comfort, repose, health, or safety of any such persons or the public, or which would cause, or have a natural tendency to cause, injury or damage to business or property. Land uses and industrial operations known to emit objectionable odors include wastewater treatment facilities, food processing facilities, coffee roasters, fiberglass operations, refineries, feed lots/dairies, and composting facilities (VCAPCD 2003). The project would include the construction and operation of a multi-family residences with amenities such as community centers and open space. None of the uses identified by VCACPD as producing substantial odors would be included in the proposed project. Therefore, operation of the project would not directly or indirectly generate objectionable odors or other emissions that would adversely affect a substantial number of people, and there would be no impact.

3.3 Cumulative Air Quality Impacts

The geographic scope for the cumulative air quality impact analysis is the Basin. Because the Ventura County portion of the Basin is designated a nonattainment area for the federal and State eight-hour ozone standards, the federal hourly ozone standard, and the State PM_{10} standards, there is an existing adverse cumulative effect in the Basin relative to these pollutants.

A project would have a cumulatively considerable contribution to a significant cumulative impact if it is inconsistent with the applicable adopted federal and State air quality plans. As discussed under Impact AQ-2, the project would be consistent with the VCAPCD screening thresholds since construction emissions and new operational emissions would not exceed applicable thresholds for criteria pollutants with the incorporation of Mitigation Measures AQ-1 and AQ-2. Additionally, as discussed above under Impact AQ-1, the project would not conflict with or obstruct implementation of the AQMP. Therefore, the project's contribution to existing significant cumulative air quality impacts related to criteria air pollutant emissions would not be cumulatively considerable.

Carbon monoxide and TAC emissions are a localized issue. According to the Ventura County Approved and Pending Permits Map and list, as of August 8, 2025, there is only one pending project within the vicinity of the project site, which is an application to allow the continued operation of an existing overnight dog kennel for a 10-year period. This pending permit does not involve any physical or operational changes to the existing dog kennel (Ventura County 2025a and 2025b). Therefore, there would not be any major construction projects occurring in proximity and simultaneously to the project site while the project is being constructed. Therefore, there would not be a significant cumulative

impact to sensitive receptors during construction activity. In addition, and as discussed in Impact AQ-3, the existing CO levels in the region have been historically low and operation of the project would not generate a CO hotspot. Operation of the project would not include stationary air pollution that would generate substantial TAC emissions. Therefore, significant cumulative impacts to sensitive receptors during operation of the project would not occur.

3.4 Project-Level Greenhouse Gas Emissions Impacts

Threshold:	Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
Threshold:	Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Impact GHG-1 IMPLEMENTATION OF THE PROJECT WOULD NOT GENERATE GHG EMISSIONS, EITHER DIRECTLY OR INDIRECTLY, THAT MAY HAVE A SIGNIFICANT IMPACT ON THE ENVIRONMENT. IMPLEMENTATION OF THE PROJECT WOULD NOT CONFLICT WITH AN APPLICABLE PLAN, POLICY, OR REGULATION ADOPTED FOR THE PURPOSE OF REDUCING GHG EMISSIONS, AS THE PROJECT IS CONSISTENT WITH THE 2022 SCOPING PLAN, SCAG'S 2024-2050 RTP/SCS, AND THE VENTURA COUNTY 2040 GENERAL PLAN. IMPACTS WOULD BE LESS THAN SIGNIFICANT.

Quantified Emissions

Construction and operation of the project would generate GHG emissions. This analysis considers the combined impact of GHG emissions from both construction and operation.

Construction Emissions

Construction facilitated by the project would generate temporary GHG emissions primarily from the operation of construction equipment onsite, as well as from vehicles transporting construction workers to and from the project site and heavy trucks to transport building materials and soil.

Construction activities for the project would generate an estimated 1,859 MT of CO_2e as shown in Table 8. Amortized over a 30-year period (the assumed life of the project per AEP guidance), construction of the project would generate approximately 62 MT of CO_2e per year.

Table 8 Estimated Construction GHG Emissions

Phase	Annual Emissions (MT of CO_2e/year)		
	Phase 1	**Phase 2**	**Phase 3**
Demolition	22	NA	NA
Site Preparation	217	217	217
Grading	40	40	40
Building Construction	334	332	334
Paving	21	18	21
Architectural Coating	2	2	2
Total Emissions by phase	636	609	614
Total Project Emissions	**1,859**		
Amortized Over 30 Years	62		

MT CO_2e = metric tons of carbon dioxide equivalent

Source: See Appendix B for CalEEMod outputs

Operational and Total Emissions

Operation of the proposed project would generate GHG emissions associated with area sources (e.g., landscape maintenance), energy and water usage, vehicle trips, and wastewater and solid waste generation.

As shown in Table 9, when combined with amortized construction emissions, the project would result in 2,645 MT of CO_2e per year. GHG emissions were quantified for informational purposes only as there is no numeric threshold for projects within Unincorporated Ventura County.

Table 9 Estimated GHG Emissions

Emission Source	Annual Emissions (MT of CO_2e/year)		
Operational	**Phase 1**	**Phase 2**	**Phase 3**
Mobile	576	625	765
Area	1	1	2
Energy	213	98	175
Water	13	9	13
Waste	30	24	37
Refrigerant	0.15	0.13	0.20
Operational Emissions by Phase	**834**	758	991
Combined Construction and Operational Emissions			
Construction Emissions	62		
Operational Emissions	2,583		
Total Project Emissions	**2,645**		

MT CO_2e = metric tons of carbon dioxide equivalent

Source: See Appendix B for CalEEMod outputs

Plan Consistency

The project's consistency with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs to are described below.

2022 Scoping Plan

The principal State plan to monitor and regulate GHGs is AB 32, the California Global Warming Solutions Act of 2006, which was followed by SB 32. The quantitative goal of AB 32 was to reduce GHG emissions to 1990 levels by 2020. According to CARB, California achieved its 2020 GHG emission reduction target in 2016. The goal of SB 32 is to reduce GHG emissions to 40 percent below 1990 levels by 2030. In 2022, the State passed AB 1279, which declares the State will achieve net-zero GHG emissions and reduce GHG emissions by 85 percent below 1990 levels by 2045. The latest iteration of the Scoping Plan is the 2022 Scoping Plan, which focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the state's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

The project would be consistent with these goals through project design, which includes complying with the latest Title 24 Green Building Code (CALGreen) and Building Efficiency Energy Standards and installation of solar panels. The project would allocate passenger vehicle spaces for electric vehicle charging in accordance with the requirements of CALGreen. In addition, the project would install water efficient fixtures to conform to state water conservation requirements. The project would be served by SCE, which is required to increase its renewable energy procurement in accordance with SB 100 targets. The project would be 100 percent electric and therefore would not increase natural gas usage within the region. Further, as discussed below, the project would be consistent with the Ventura County CAP (contained within the 2040 General Plan), which meets the 2030 statewide goals

and was developed consistent with the 2022 Scoping Plan. Therefore, the project would not conflict with the 2022 Scoping Plan.

2024-2050 Regional Transportation Plan/Sustainable Communities Strategy

The SCAG 2024-2050 RTP/SCS is forecast to help California reach its GHG reduction goals by reducing GHG emissions from passenger cars in the SCAG region by 19 percent by 2035 in accordance with the most recent CARB targets adopted in March 2018.[9] The 2024-2050 RTP/SCS focuses on four core categories: mobility, communities, environment, and economy. In addition, the SCS implementation strategies include focusing growth near destinations and mobility options, promoting diverse housing choices, leveraging technology innovations, and supporting implementation of sustainability policies. The project's consistency with the 2024-2050 RTP/SCS is discussed in Table 10. As shown therein, the project would be consistent with the GHG emission reduction strategies contained in the 2024-2050 RTP/SCS.

Table 10 Consistency with Applicable SCAG 2024-2050 RTP/SCS Strategies

Strategy/Action	Project Consistency
Mobility/Communities ▪ Pursue the development of Complete Streets that comprise a safe, multimodal network with flexible use of public rights-of-way for people of all ages and abilities using a variety of modes (e.g., people walking, biking, rolling, driving, taking transit). ▪ Encourage and support the implementation of projects, both physical and digital, that facilitate multimodal connectivity, prioritize transit and shared mobility, and result in improved mobility, accessibility and safety. ▪ Promote the growth of origins and destinations, with a focus on future housing and population growth, in areas with existing and planned urban infrastructure that includes transit and utilities ▪ Encourage housing development in transit-supportive and walkable areas to create more interconnected and resilient communities.	**Consistent.** This is a local/regional policy. However, the project would also be within walking and biking distance of existing transportation facilities. The project is adjacent to a Class I Bike lane along North Ventura Avenue. Further the project is served by Gold Coast Transit with Gold Coast Route 16 stopping along North Ventura Avenue. A bus stop for Route 16 is approximately 450 feet away from the project site and a bus stop for Route 18 is approximately a third of a mile away from the project site. Therefore, the project would be consistent with SCAG 2024-2050 RTP/SCS mobility and community strategies.
Environment ▪ Support communities across the region to advance innovative sustainable development practices. ▪ Support investments that reduce hazardous air pollutants and greenhouse gas emissions. ▪ Accelerate the deployment of a zero-emission transportation system and use near-zero-emission technology to offer short-term benefits where zero-emissions solutions are not yet feasible or commercially viable. ▪ Promote sustainable water use planning, practices and storage that improve regional water security and resilience in a drier environment.	**Consistent.** The project would comply with the latest Title 24 Building Energy Efficiency Standards and install energy-efficient appliances. Additionally, the project would incorporate all-electric appliances and comply with the latest Title 24 Building Energy Efficiency Standards through the installation of solar panels and EV infrastructure. The project would also meet CALGreen requirements by using water-efficient fixtures and irrigation systems. Therefore, the project aligns with SCAG's 2024-2050 RTP environmental policies and strategies aimed at reducing GHG emissions.

[9] Eight percent emissions reduction from 2005 levels by 2020 target was achieved (SCAG 2024).

Strategy/Action	Project Consistency

Source: SCAG 2024

County of Ventura 2040 General Plan

As shown in in Table 11, the project would be consistent with the policies related to GHG emissions contained in the Ventura County 2040 General Plan.

Table 11 Consistency with Ventura County 2040 General Plan

Strategy/Action	Project Consistency
COS-10.4 Greenhouse Gas Reductions in Existing and New Development. The County shall reduce GHG emissions in both existing and new development through a combination of measures included in the GHG Strategy, which includes new and modified regulations, financing and incentive-based programs, community outreach and education programs, partnerships with local or regional agencies, and other related actions	**Consistent.** The County is responsible for implementing this policy. However, the project would be designed and operated to meet the applicable requirements of CALGreen and Title 24. The project would be all-electric and would include electric vehicle spaces and solar panels consistent with the Title 24 and CALGreen requirements. The project's water consumption would be minimized through the use of water-efficient appliances/fixtures and water-efficient irrigation. Furthermore, the project would be equipped with energy-efficientt appliances and lighting. Therefore, the project would support this policy.
COS-8.9 Urban Tree Canopy Improvements for Energy Conservation. The County shall encourage discretionary development to include the planting of shade trees on each property and within parking areas to reduce radiation heat production.	**Consistent.** The project would provide 63-acres of conservation space. Landscaping and trees would be added to the site, consistent with County regulations. Therefore, the project would be consistent with this policy.
COS-9.1 Open Space Preservation. The County shall preserve natural open space resources through: ▪ the concentration of development in Urban Areas and Existing Communities; ▪ use of cluster or compact development techniques in discretionary development adjacent to natural open space resources; ▪ maintaining large lot sizes in agricultural areas, rural and open space areas; ▪ discouraging conversion of lands currently used for agricultural production or grazing; ▪ limiting development in areas constrained by natural hazards; and ▪ encouraging agricultural and ranching interests to maintain natural habitat in open space areas where the terrain or soil is not conducive to agricultural production or grazing. **COS-9.3 Open Space Preservation.** The County shall place a high priority on preserving open space lands for recreation, habitat protection, wildlife movement, flood hazard management, public safety, water resource protection, and overall community benefit.	**Consistent.** The project would include a 63-acre conservation parcel, thereby preserving open space resources.

Strategy/Action	Project Consistency
CTM-3.5 Bicycle Routes in Rural Areas. The County shall plan for bicycle network connectivity in rural, agricultural, and open space areas in a way that supports and complements business and agricultural activities in those areas.	**Consistent.** The County is responsible for implementing this policy. However, the project would be designed and operated to include secure bicycle parking spaces. The project is designed for bicycle circulation and connectivity to the Class I bike lane along North Venture Avenue. Therefore, the project would support the development of a rural bicycle network.
CTM-6.5 Electric Vehicle Charging Stations. The County shall support the installation of electric vehicle charging stations, where feasible, at County facilities, parking lots, park-and-ride lots, truck stops, and new development.	**Consistent.** The County is responsible for implementing this policy. However, the proposed project would include electric vehicle charging stations in accordance with the requirements of CALGreen. Thereby, supporting the use electric vehicles by project residents.
HAZ-T Cool Roof Ordinance. The County shall adopt a Cool Roof Ordinance that exceeds the prescriptive cool roof requirements of the 2019 California Building Energy Efficiency Standard for Residential and Nonresidential Buildings by 25 percent (California Energy Code). Under a Cool Roof Ordinance, the County would require new construction to replace or re-coat 2,500 square feet for nonresidential and 1,250 square feet of roof space for residential buildings, or 72.5 percent or more of roofs.	**Consistent.** The proposed project would be consistent with applicable, adopted County ordinances that are in place at the time of construction. Therefore, the proposed project would not conflict with this policy.
HAZ-V Cool Pavements Standards. The County shall incorporate cool pavement standards into the County's development standards for County and private development projects, in both new construction and changes to existing onsite paved surface areas (e.g., parking lots, private roadways, other hardscapes).	**Consistent.** The proposed project would be consistent with applicable, adopted County ordinances that are in place at the time of construction. Therefore, the proposed project would not conflict with this policy.
HAZ-10.5 Air Pollution Impact Mitigation Measures for Discretionary Development. The County shall work with applicants for discretionary development projects to incorporate bike facilities, solar water heating, solar space heating, incorporation of electric appliances and equipment, the use of zero and/or near zero emission vehicles and other measures to reduce air pollution impacts and reduce greenhouse gas (GHG) emissions.	**Consistent.** The project would be designed and operated to meet the applicable requirements of CALGreen and Title 24. The project's water consumption would be minimized through the use of water-efficient appliances/fixtures and water-efficient irrigation. Furthermore, the project would include solar panels and would be equipped with energy-efficient appliances and lighting. The project would be all-electric and would incorporate electric vehicle charging stations in accordance with CALGreen requirements. Therefore, the project would support this policy.
WR-3.2 Water Use Efficiency for Discretionary Development. The County shall require the use of water conservation techniques for discretionary development, as appropriate. Such techniques include low flow plumbing fixtures in new construction that meet or exceed the California Plumbing Code, use of graywater or reclaimed water for landscaping, retention of stormwater runoff for direct use and/or groundwater recharge, and landscape water efficiency standards that meet or exceed the standards in the California Model Water Efficiency Landscape Ordinance.	**Consistent.** The project would be designed and operated to meet the applicable requirements of CALGreen, Title 24, and the Model Water Efficiency Landscape Ordinance. The project's water consumption would be minimized through the use of water-efficient appliances/fixtures, water-efficient landscaping design, and water-efficient irrigation. Therefore, the project would be consistent with this policy.

Strategy/Action	Project Consistency

Source: Ventura County 2023

Thus, given the above discussion, the project would be consistent with state and local policies for reducing GHG emissions and impacts would be less than significant.

3.5 Greenhouse Gas Emissions Cumulative Impacts

The geographic scope for related projects considered in the cumulative impact analysis for GHG emissions is global because impacts of climate change are experienced on a global scale regardless of the location of GHG emission sources. GHG emissions and climate change are, by definition, cumulative impacts. Thus, the issue of climate change involves an analysis of whether a project's contribution towards an impact is cumulatively considerable. As discussed under Impacts GHG-1 and GHG-2 above, project impacts related to GHG emissions would be less than significant and would be consistent with the state and local plans for reducing GHG emissions. Therefore, the project's contribution to cumulative GHG impacts would be less than significant.

Community Center	4,810	N/A	3,600	sqft	Community Center
Maintenance Bldg	637	N/A	637	sqft	
Trash Enclosure	660	440	660	sqft	
	103,159	110,250	145,138		

Project Features

100% Affordable
328 -Unit Farm worker housing complex
All Electric
Electric Charging Stations
Bicycle parking

Construction Schedule:	Construction length provided by applicant	
Construction Equipment	Default CalEEMod	
Construction Trucks/Vehicles	Default CalEEMod	(rounded up)
	**17.6 miles of transport to Toland Landfill	

Ventura Ranch Farmworker Housing Complex
Construction Emissions

Cut/Fill	Total Project		
	Net Import:	17,000 cy	Preliminary Grading Plan (3/25/2024)
	(assumed for each phase, for flexibility as exact grading is not knowin by phase)		
Demolition	Provided by applicant		
	5,700 sqft	Phase 1 Only	

Ventura Ranch Farmworker Housing Complex
Operational Emissions Assumptions

CalEEMod Defaults are assumed for modeling purposes unless specifically discussed in the Operational Assumptions below.

Mobile Sources

1,578	Daily Trips.	Ventura Ranch Trip Generation Memo, July 31, 2025
328	Units	
4.81	Trips/unit	
CalEEMod Determined	Annual Trips	
CalEEMod Defaults	VMT	
CalEEMod Defaults	Fleet Mix	

Solid Waste CalEEMod Defaults

Solid Waste CalEEMod Defaults

Area Sources Defaults

Energy Use Default for Electric

No Natual Gas

1 kwh = 3412 Btu

Appendix B

CalEEMod Output

Ventura Ranch Farmworker Housing Complex -Phase 1 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2026) - Unmitigated

3.2. Demolition (2026) - Mitigated

3.3. Site Preparation (2026) - Unmitigated

3.4. Site Preparation (2026) - Mitigated

3.5. Grading (2026) - Unmitigated

3.6. Grading (2026) - Mitigated

3.7. Building Construction (2026) - Unmitigated

3.8. Building Construction (2026) - Mitigated

3.9. Building Construction (2027) - Unmitigated

3.10. Building Construction (2027) - Mitigated

3.11. Paving (2027) - Unmitigated

3.12. Paving (2027) - Mitigated

3.13. Architectural Coating (2027) - Unmitigated

3.14. Architectural Coating (2027) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Ventura Ranch Farmworker Housing Complex -Phase 1
Construction Start Date	3/1/2026
Operational Year	2028
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.20
Precipitation (days)	2.20
Location	34.33456519655094, -119.28964302429546
County	Ventura
City	Unincorporated
Air District	Ventura County APCD
Air Basin	South Central Coast
TAZ	3405
EDFZ	8
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	92.0	Dwelling Unit	3.77	97,052	60,510	0.00	277	—

Parking Lot	219	Space	2.34	0.00	0.00	0.00	—	—
Health Club	4.81	1000sqft	0.00	4,810	0.00	0.00	—	—
Industrial Park	0.64	1000sqft	0.00	637	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	196,530	65,510	8,171	2,724	5,227

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	5,700	—
Site Preparation	0.00	0.00	15.0	0.00	—
Grading	17,000	0.00	90.0	0.00	—
Paving	0.00	0.00	0.00	0.00	2.00

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Parking Lot	2.00	100%
Health Club	0.00	0%
Industrial Park	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	346	0.03	< 0.005
2027	0.00	346	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments Mid Rise	443	443	443	161,520	4,778	4,778	4,778	1,743,888

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit

Temperature and Extreme Heat	15.6	annual days of extreme heat
Extreme Precipitation	8.00	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	49.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0
AQ-PM	23.4
AQ-DPM	1.77
Drinking Water	65.1
Lead Risk Housing	81.1
Pesticides	60.9
Toxic Releases	17.7

Traffic	22.5
Effect Indicators	—
CleanUp Sites	63.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	31.0
Healthy Places Index Score for Project Location (b)	44.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on Project Description for Phase 1
Construction: Construction Phases	Overlapping building construction with paving and architectural coating.
Construction: Trips and VMT	Demo and grading material would be taken to Toland Road Landfill, located approximately 17.6 miles northeast from of the project site.
Operations: Vehicle Data	Based on project specific traffic study and affordable housing ITE trip rate

Operations: Energy Use	Conversion from Natural gas to 100% electric
Construction: Dust From Material Movement	based on project information - modeled in all 3 grading phases to ensure adequate export

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	15.6	annual days of extreme heat
Extreme Precipitation	8.00	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	49.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0
AQ-PM	23.4
AQ-DPM	1.77
Drinking Water	65.1
Lead Risk Housing	81.1
Pesticides	60.9
Toxic Releases	17.7
Traffic	22.5
Effect Indicators	—
CleanUp Sites	63.7
Groundwater	66.9
Haz Waste Facilities/Generators	77.2
Impaired Water Bodies	77.3
Solid Waste	59.2
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	31.0
Healthy Places Index Score for Project Location (b)	44.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on Project Information
Construction: Construction Phases	Shifted to overlap paving and architectural coating with building construction
Construction: Trips and VMT	—
Operations: Vehicle Data	Based on traffic study ITE rates for affordable housing units
Operations: Energy Use	No natural gas used, adjusted natural gas to electric to account for additional electrical appliances etc.
Construction: Dust From Material Movement	based on project information. All export is modeled in each phase as a conservative estimate of export

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Ventura Ranch Farmworker Housing Complex - Phase 2 Mitigated
Construction Start Date	3/1/2028
Operational Year	2030
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.20
Precipitation (days)	2.20
Location	34.3347811676463, -119.28963694784979
County	Ventura
City	Unincorporated
Air District	Ventura County APCD
Air Basin	South Central Coast
TAZ	3405
EDFZ	8
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	104	Dwelling Unit	2.91	109,810	42,684	0.00	313	—

Parking Lot	131	Space	1.40	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	15.6	annual days of extreme heat
Extreme Precipitation	8.00	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	49.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0
AQ-PM	23.4
AQ-DPM	1.77
Drinking Water	65.1
Lead Risk Housing	81.1
Pesticides	60.9
Toxic Releases	17.7
Traffic	22.5
Effect Indicators	—
CleanUp Sites	63.7
Groundwater	66.9
Haz Waste Facilities/Generators	77.2
Impaired Water Bodies	77.3
Solid Waste	59.2
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	31.0
Healthy Places Index Score for Project Location (b)	44.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on Project Information
Construction: Construction Phases	Shifted to overlap paving and architectural coating with building construction
Construction: Trips and VMT	—
Operations: Vehicle Data	Based on traffic study ITE rates for affordable housing units
Operations: Energy Use	No natural gas used, adjusted natural gas to electric to account for additional electrical appliances etc.
Construction: Dust From Material Movement	based on project information. All export is modeled in each phase as a conservative estimate of export

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Ventura Ranch Farmworker Housing Complex - Phase 3 Unmitigated
Construction Start Date	4/1/2030
Operational Year	2032
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.20
Precipitation (days)	2.20
Location	34.3347811676463, -119.28963694784979
County	Ventura
City	Unincorporated
Air District	Ventura County APCD
Air Basin	South Central Coast
TAZ	3405
EDFZ	8
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	132	Dwelling Unit	6.29	140,241	85,764	0.00	397	—

Parking Lot	222	Space	2.37	0.00	0.00	0.00	—	—
Health Club	3.60	1000sqft	0.00	3,600	0.00	—	—	—
Industrial Park	0.64	1000sqft	0.00	637	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	15.6	annual days of extreme heat
Extreme Precipitation	8.00	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	49.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0
AQ-PM	23.4
AQ-DPM	1.77
Drinking Water	65.1
Lead Risk Housing	81.1
Pesticides	60.9
Toxic Releases	17.7
Traffic	22.5
Effect Indicators	—
CleanUp Sites	63.7
Groundwater	66.9
Haz Waste Facilities/Generators	77.2
Impaired Water Bodies	77.3
Solid Waste	59.2

Sensitive Population	—
Asthma	19.1
Cardio-vascular	1.86
Low Birth Weights	20.5
Socioeconomic Factor Indicators	—
Education	62.9
Housing	38.8
Linguistic	—
Poverty	48.0
Unemployment	15.8

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	37.91864494
Employed	27.51186963
Median HI	57.38483254
Education	—
Bachelor's or higher	40.20274605

2016 Voting	61.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	31.0

Healthy Places Index Score for Project Location (b)	44.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on Project Information
Construction: Construction Phases	Shifted to overlap paving and architectural coating with building construction
Construction: Trips and VMT	—
Operations: Vehicle Data	Based on traffic study ITE rates for afforable housing units.
Operations: Energy Use	No natural gas used, adjusted natural gas to electric to account for additional electrical appliances etc.
Construction: Dust From Material Movement	based on project information. All export is modeled in each phase as a conservative estimate of export

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	15.6	annual days of extreme heat
Extreme Precipitation	8.00	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	49.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0
AQ-PM	23.4
AQ-DPM	1.77
Drinking Water	65.1
Lead Risk Housing	81.1
Pesticides	60.9
Toxic Releases	17.7
Traffic	22.5
Effect Indicators	—
CleanUp Sites	63.7
Groundwater	66.9
Haz Waste Facilities/Generators	77.2
Impaired Water Bodies	77.3
Solid Waste	59.2
Sensitive Population	—
Asthma	19.1
Cardio-vascular	1.86
Low Birth Weights	20.5
Socioeconomic Factor Indicators	—
Education	62.9
Housing	38.8
Linguistic	—
Poverty	48.0
Unemployment	15.8

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	37.91864494
Employed	27.51186963
Median HI	57.38483254
Education	—
Bachelor's or higher	40.20274605
High school enrollment	12.02361093
Preschool enrollment	52.4573335
Transportation	—
Auto Access	80.12318748
Active commuting	59.59194149
Social	—
2-parent households	43.74438599
Voting	53.68920826

Hardship	70.7
Other Decision Support	—
2016 Voting	61.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	31.0
Healthy Places Index Score for Project Location (b)	44.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on Project Information
Construction: Construction Phases	Shifted to overlap paving and architectural coating with building construction
Construction: Trips and VMT	—
Operations: Vehicle Data	Based on traffic study ITE rates for afforable housing units.
Operations: Energy Use	No natural gas used, adjusted natural gas to electric to account for additional electrical appliances etc.
Construction: Dust From Material Movement	based on project information. All export is modeled in each phase as a conservative estimate of export
