Signing/striping should be implemented in conjunction with detailed construction plans for the project site.

2.0 INTRODUCTION

This traffic impact analysis (TIA) analyzes the projected traffic operations associated with the proposed Ventura Ranch project located at 4884 North Ventura Avenue in Ventura County. The purpose of this TIA is to evaluate potential circulation system deficiencies that may result from development of the proposed project, and to recommend improvements to achieve acceptable operations, if applicable. 1. N. Ventura Avenue / Shell Road;
2. N. Ventura Avenue / Crooked Palm Road;

4. N. Ventura Avenue / Holt Street;
5. N. Ventura Avenue / Fraser Lane;
6. N. Ventura Avenue / Bard Lane;

The study intersections are all located within Ventura County. This traffic analysis follows Ventura County *Guidelines for the Preparation of Traffic Impact Reports (October 2021)*.

The study intersections and roadway segments which are analyzed for the following study scenarios:

- Existing Traffic Conditions (Existing);
- Opening Year (2024) Conditions (Existing + Ambient + Cumulative);
- Opening Year (2024) plus Project Conditions (Existing + Ambient + Cumulative + Project); and

Traffic operations for intersection counts are evaluated for the following time periods:

- Weekday AM Peak Hour occurring within 7:00 AM to 9:00 AM; and
- Weekday PM Peak Hour occurring within 4:00 PM to 6:00 PM.

Traffic operations for 24-hour roadway segment counts are evaluated by averaging three (3) consecutive days together.

2.3 ANALYSIS METHODOLOGY

2.3.1 Intersection Analysis Methodology

The traffic analysis focuses on the project's off-site traffic-related impacts at the traffic study area intersections and on the study area roadways. In accordance with Ventura County, intersection operation for signalized intersections is evaluated using the intersection operation for unsignalized intersections is evaluated using the Highway Capacity Manual (HCM) methodology.

The procedure for stop-control analysis determines the average total delay, expressed in seconds of delay per vehicle, for left turns from the major street and from the stop-controlled minor street traffic stream. Delay values are calculated based on the relationship between traffic on the major street and the availability of acceptable "gaps" in this stream through which conflicting traffic movements can be made.

Collected peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. It is a common practice in LOS analysis to conservatively use a peak 15-minute flow rate

applied to the entire hour to derive flow rates in vehicles per hour that are used in the LOS analysis. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume. PHF = [Hourly Volume]/ [4 * Peak 15-Minute Volume]. The use of a 15-minute PHF produces a more detailed and conservative analysis compared to analyzing vehicles per hour. Existing PHFs, obtained from the existing traffic counts have been used for all analysis scenarios in this study.

Ventura County traffic study guidelines also require unsignalized intersection operations be analyzed utilizing the HCM 7th Edition methodology. Intersection operation for unsignalized intersections is based on the weighted average control delay expressed in seconds per vehicle.

At a two-way or side-street stop-controlled intersection, LOS is calculated for each stop-controlled minor street movement, for the left-turn movement(s) from the major street, and for the intersection as a whole. For approaches consisting of a single lane, the delay is calculated as the average of all movements in that lane. For all-way stop-controlled intersection, LOS is computed for the intersection as a whole.

Table 1 describes the general characteristics of traffic flow and accompanying delay ranges at unsignalized intersections.

Table 1

HCM – LOS & Delay Ranges – Unsignalized Intersections

Level of Service	Description	Delay (in seconds)
A	Little or no delays.	0 – 10.00
B	Short traffic delays.	10.01 – 15.00
C	Average traffic delays.	15.01 – 25.00
D	Long traffic delays. Multiple vehicles in queue.	25.01 – 35.00
E	Very long delays. Demand approaching capacity of intersection	35.01 – 50.00
F	Very constrained flow with extreme delays and intersection capacity exceeded.	> 50.01

Source: Transportation Research Board, *Highway Capacity Manual*, HCM 7 Edition (Washington D.C., 2016).

This analysis utilizes *PTV Vistro 2022* analysis software for all signalized and unsignalized intersections. Vistro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis specified in Chapter 16 of the HCM. The level of service and capacity analysis performed within PTV Vistro takes the optimization and coordination of signalized intersections within a network into consideration.

Daily Roadway Analysis Roadway segment level of service is estimated by comparing the two-way 24-hour traffic volumes on the roadway segment to the daily roadway capacity, based on its functional classification. This comparison results in a volume-to-capacity (v/c) ratio, which represents the percentage of the daily vehicular capacity that is required to accommodate the daily traffic volume. **Table 2** presents the daily roadway capacity for each roadway classification.

2.4 PERFORMANCE CRITERIA

2.4.1 Ventura County

The Ventura County has established level of service "C" or better as acceptable LOS for all intersections along the designated street and highway system in the County's General Plan Transportation and Mobility.

For the purposes of analyzing transportation deficiencies, Ventura County identifies deficiencies through a comparison of "without project" and "with project" traffic conditions. The determination of a deficiency at an intersection is based on a project's contribution to the intersection's volume-to-capacity (V/C) ratio as defined below in **Table 3**.

Table 3

Ventura County Thresholds of Significance

Minimum Level of Service	Significant Impact Threshold
C	All County maintained local roads.
D	All County thoroughfares and state highways within the unincorporated area of the County, except as provided below.
E	1. State Route 33 between the end of the Ojai freeway and the City of Ojai. 2. State Route 118 between Santa Clara Avenue and the City of Moorpark. 3. State Route 34 (Somis Road) north of the City of Camarillo. 4. Santa Rosa Road between Camarillo city limit line and Thousand Oaks city limit line. 5. Moorpark Road north of Santa Rosa Road to Moorpark city limits line.
Varies	The LOS prescribed by the applicable city for all State highways, city thoroughfares, and city maintained local roads located within that city, if the city has formally adopted General Plan policies, ordinances, or a reciprocal agreement with the County, pertaining to development in the city that would individually or cumulatively affect the LOS of State highways, County thoroughfares and County-maintained local roads in the unincorporated area of the County
	County LOS standards are applicable for any city that has not adopted its own standards or has not executed a reciprocal agreement with the County pertaining to impacts to County roads.
At any intersection between two roads, each of which has a prescribed minimum acceptable LOS, the less stringent LOS of the two shall be the minimum acceptable LOS of that intersection.

4.0 PROPOSED PROJECT

4.1 PROJECT DESCRIPTION

The proposed project consists of 328 multi-family residential dwelling units. The primary site entrance will be established through two full-access driveways on N Ventura Avenue. Additionally an emergency access only, gated access is scheduled for construction on Floral Drive, located south of Bounds Road. This road will be gated and access only available if first responders open the gate. The site is currently zoned as agriculture and classified as low density residential in the Ventura County General Plan Land Use Plan. The project site is currently occupied by agriculture.

The proposed project is anticipated to be built and generating trips in 2024. **Exhibit 2** previously showed the proposed project site plan.

4.2 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic, both inbound and outbound, produced by a development. Determining trip generation for a proposed project is based on projecting the amount of traffic that the specific land uses being proposed will produce. Industry standard *Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021)* trip generation rates were used to determine trip generation of for most of the proposed project land uses.

Table 7 summarizes the projected AM peak hour, PM peak hour and daily trip generation of the proposed project. The proposed project is projected to generate 2,211 daily trips, 131 AM peak hour trips, and 167 PM peak hour trips.

Table 7

4.3 PROJECT TRIP DISTRIBUTION

Projecting trip distribution involves the process of identifying probable destinations and traffic routes that will be utilized by the proposed project's traffic. The potential interaction between the proposed land use and surrounding regional access routes are considered to identify the probable routes onto which project

traffic would distribute. The projected trip distribution for the proposed project is based on anticipated travel patterns to and from the project site.

Exhibit 6 shows the projected trip distribution of proposed project trips.

4.4 PROJECT TRIP DISTRIBUTION

Guidelines require that other reasonably foreseeable development projects which are either approved or are currently being processed in the study area also be included as part of a cumulative analysis scenario. A list of cumulative projects was developed for this analysis through consultation with County staff, and obtainment of current development status reports. **Exhibit 7** shows a list of approved cumulative projects was provided by Ventura County. A summary of the cumulative projects land uses is shown in **Table 8**.

5.0 OPENING YEAR (2024) CONDITIONS (EAC)

Opening Year (2024) Conditions (EAC) traffic conditions analysis is intended identify baseline conditions in the near-term with cumulative projects and without the proposed project.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for the *EAC* scenario are consistent with those previously shown in **Exhibit 3**.

5.2 EAC TRAFFIC VOLUMES

EAC volumes do not include background traffic. Since the proposed project is expected to be built and generating trips in 2024, EAC volumes include a growth rate of 2% per year for one year, applied to existing volumes. The cumulative projects were provided by Ventura County staff which were added to the analysis. **Exhibit 8** and **Exhibit 9** shows *EAC* AM and PM peak hour volumes at the study intersections.

Opening Year (2024) Volumes = (Existing (2023) Counts * 1.02^1) + Cumulative Volumes.

5.3 EAC INTERSECTION LEVEL OF SERVICE ANALYSIS

EAC conditions AM and PM peak hour intersection analysis is shown in **Table 9**. HCM analysis sheets are provided in **Appendix C.**

Table 9 the study intersections are projected to continue to operate at an acceptable LOS during the AM and PM peak hours for *EAC* conditions.

5.4 EAC CONDITIONS ROADWAY SEGMENT ANALYSIS

The roadway level of service analysis was conducted based on the roadway capacities presented previously in this report. The results of the roadway analysis for Existing Conditions are shown on **Table 10**. The Table indicates that the study roadway segment will continue operating at an acceptable level of service.

6.0 OPENING YEAR (2024) PLUS PROJECT CONDITIONS (EACP)

Opening Year (2024) plus Project (EACP) traffic conditions analysis is intended to identify the project-related impacts on both the existing and planned near-term circulation system.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for the *Opening Year (2024) plus project* scenario are consistent with those previously shown in **Exhibit 3**. A conceptual striping plan showing site access into the project is presented in **Exhibit 10**

6.2 EACP TRAFFIC VOLUMES

EACP volumes include background traffic plus the addition of traffic projected to be generated by nearby cumulative projects. Since the proposed project is expected to be built and generating trips in 2024 *EACP* volumes include a growth rate of 2% for one year, applied to existing volumes. The Ventura County cumulative projects were added to the analysis. **Exhibit 11** and **Exhibit 12** shows *EACP* AM and PM peak hour volumes at the study intersections.

Opening Year (2024) plus Project Volumes = (Existing (2023) Counts * 1.02^2) + Cumulative Projects + Project Volumes .

6.3 EACP INTERSECTION LEVEL OF SERVICE ANALYSIS

Opening Year (2024) plus Project traffic conditions AM and PM peak hour intersection analysis is shown in **Table 11** *H*CM analysis sheets are provided in ***Appendix C***.
